Major Economic Indicators: Fortnightly Update[1]

(Up to 15th September, 2026)

Volume: 09/2026, Issue: 01

This report provides a brief overview of Bangladesh's major economic indicators up to 15th September 2026, highlighting key developments in money supply, policy and market interest rates, bank credit, government revenue, trade, remittances, foreign exchange reserves, exchange rates, and inflation. While inflation has eased, following moderate devaluation of the remittance inflows and foreign exchange reserves have increased. While slower private sector credit growth and rising government borrowing remain key concerns. Together, these trends provide a picture of Bangladesh's economic progress, ongoing challenges, and their potential impact on businesses and everyday life.

Bangladesh's economy entered FY27 with a mixed picture of progress and challenges. At the end of August 2026, broad money grew by 12.40 percent and bank deposits continued to rise, reflecting increased savings. However, the growth in credit was driven mainly by the public sector, where borrowing increased by 32.45 percent. On the other hand, private sector credit grew by only 4.75 percent, which was slower than the previous fiscal year's. This divergence suggests that government borrowing continued to drive credit expansion, while private sector activities faced comparatively weaker credit demand. Bangladesh Bank reduced policy rate by 50 basis points on 02 August 2026 to 9.50 percent balancing inflationary pressure and growth objectives.

During 1 July-15 September 2026, net government borrowing from the banking system increased compared with the corresponding period of the previous year. Meanwhile, NBR revenue collection in FY26 reached only 82.60 percent of the annual target, reflecting a shortfall in revenue mobilization. This shortfall highlights the persistent challenges in mobilizing domestic resources to finance government expenditure.

In the external sector, a stronger remittance inflow was a significant support. During 1 July-15 September 2026, remittances increased by 15.47 percent compared with the same period a year earlier, helping gross foreign exchange reserves reach USD 36.20 billion on 15 September 2026. Yet the picture was not uniformly positive as exports increased by only 5.55 percent during July-August, 2026 compared with July-August 2025, while imports grew by 12.20 percent during July-August, 2026. The current account surplus widened during July-August 2026, while the taka depreciated against the US dollar in September 2026 compared

[1] *Comments on any aspects of the report are welcomed and can be sent to Ms. Sadia Sultana, Additional Director, Monetary Policy Department, Bangladesh Bank, using e-mail: sadia.sultana@bb.org.bd Mr. Md. Nayem Dewan, Deputy Director, Monetary Policy Department, Bangladesh Bank, e-mail: nayem.dewan@bb.org.bd and Mr. Mohammad Saiful Islam, Assistant Director, Monetary Policy Department, Bangladesh Bank, e-mail: mislam.saiful@bb.org.bd*

to September 2025. These developments underline the importance of sustaining remittance inflows while strengthening export performance and managing external pressures.

Inflation declined slightly but remained elevated. Headline point-to-point inflation declined slightly to 8.26 percent in August 2026 from 8.32 percent in July 2026. It was also slightly lower than 8.29 percent in August 2025. Meanwhile, twelve-month average inflation fell to 8.66 percent in August 2026 from 9.58 percent in August 2025. Bangladesh Bank's contractionary monetary policy stance continued to help manage inflation. However, the ongoing high inflation in Bangladesh appears to be driven more by supply-side (cost-push) factors than demand-pull factors. Consequently, despite maintaining the policy interest rate at a high level, cost-push inflation in Bangladesh has intensified primarily due to insufficient growth in domestic production, alongside global supply chain disruptions initiated by geopolitical instability in the Middle East.
