T-bond	Treasury Bond
TOI	Total Operating Income

Bangladesh Systemic Risk Dashboard: An Overview

1. Macro risk

In the fiscal year (FY) 2017-18, real GDP growth rate (indicator 1.1) maintained an increasing trend and was recorded at 7.9 percent. The growth rate was 7.3 percent in FY17. Current account balance-to-GDP ratio (indicator 1.2) improved during the second half of the calendar year (CY) 2018 compared to the corresponding period of CY17.

Aggregate debt-to-GDP ratio (indicator 1.3) increased slightly in FY18 compared to that of FY17. During the same period, government debt-to-GDP ratio (indicator 1.4) increased due to rise in government's fiscal deficit as evident from an increase in government deficit-to-GDP ratio (indicator 1.5).

Financial burden of households, measured by household debt-to-gross disposable national income ratio (indicator 1.6), decreased during the second half of CY18 compared to the same period of CY17, but recorded an increase while compared to the first half of CY18. A similar trend was observed in Non-Financial Corporation (NFC) debt-to-GDP ratio (indicator 1.7) during the review period.

2.   Credit risk

An overall downward trend was observed in credit growth to households by both banks (indicator 2.1) and non-bank depository corporations (NBDCs) (indicator 2.2) since June 2017. Credit growth to NFCs by banks (indicator 2.3) remained almost unchanged at end-December 2018 compared to that of end-June 2018; however, the growth recorded a decline compared to that of end-December 2017. NBDCs' credit growth to NFCs (indicator 2.4) showed a decreasing trend since December 2017.

At the end of December 2018, provision maintenance ratio (indicator 2.5) of banks registered a notable increase compared to that of end-December 2017. The same ratio for financial institutions (FIs)[1] (indicator 2.6) decreased at end-December 2018 compared to that of end-June 2018 though remained almost same compared to that of end-December 2017.

In terms of changes in banks' interest rates for housing loans (indicator 2.7), a net tightening was observed at the end of December 2018, indicating a higher number of banks increased their interest rates compared to the number of banks those eased their rates.

3. Funding and liquidity risk

Bangladesh Bank provided considerable liquidity support to banks in the form of both assured liquidity support (ALS) and special repo during the second half of CY18 compared to those of preceding periods since December 2016 (indicator 3.1). Led by a high advance-to-deposit ratio (ADR) of domestic private commercial banks (PCBs), ADR of the banking industry (indicator 3.2) increased at end-December 2018 compared to both end-June 2018 and end-December 2017 positions.

---

[1] In few cases due to NBDCs' data unavailability, data of FIs, which constitute the majority of NBDCs, were used.

Maturity profile of banks' outstanding debt securities (indicator 3.3) demonstrates that treasury bonds (T-bonds) with residual maturity up to 2 years increased at end-December 2018 compared to that of end-June 2018 and continued to make up the largest share of the total value of treasury bonds outstanding while T-bonds with remaining maturity over 15 years remained the lowest. Treasury bills (T-bills) with residual maturity up to 91 days, though decreased at end-December 2018 compared to end-June 2018, constituted more than 50 percent of total outstanding T-bills. Subordinated debt (indicator 3.4), as a source of funding for banks, maintained the increasing trend at the end of the review period.

4. Market risk

Major equity indices (indicator 4.1) declined at end-December 2018 compared to end-December 2017 position; however, compared to end-June 2018, DSE Broad Index (DSEX) remained almost stable. Market price/earnings (P/E) ratio (indicator 4.2) slightly increased during the review period compared to that of the preceding period.

Average call money market rate (indicator 4.3) recorded a rise at end-December 2018 compared to the position of end-June 2018. Scheduled banks' weighted average interest rates on both deposits and advances as well as their spread (indicator 4.4) decreased in December 2018 in comparison with those of June 2018. Besides, weighted average exchange rate of BDT against USD (indicator 4.5) continued to follow the depreciating trend at end-December 2018.

5. Profitability and solvency risk

Banks' return on equity (ROE) and return on asset (ROA) (indicators 5.1a and 5.1b) decreased marginally at end-December 2018 compared to the preceding period. During the same period, cost-to-income ratio (indicator 5.1c) decreased while net interest income to total operating income ratio (indicator 5.1d) maintained the upward trend. At end-December 2018, banks' Tier-1 capital to risk-weighted assets ratio (indicator 5.2a) remained above the regulatory requirement of 6.0 percent; however, the ratio declined compared to that of end-June 2018. Banks' gross non-performing loan (NPL) ratio (indicator 5.2b) decreased slightly at end-December 2018 compared to end-June 2018 position.

FIs' ROE and ROA (indicators 5.3a and 5.3b) showed a moderate increase at end-December 2018 while cost-to-income ratio (indicator 5.3c) decreased slightly compared to end-June 2018 position. FIs' net interest income to total operating income ratio (indicator 5.3d) registered an increase during the same period. FI's Tier-1 capital to risk-weighted assets ratio (indicator 5.4a) recorded an increase while their gross NPL ratio (indicator 5.4b) declined at the end of December 2018.

6. Inter-linkages

Banks' credit growth to the government (indicator 6.1) slowed down at end-December 2018 compared to that of end-June 2018. Government borrowing from NBDCs (indicator 6.2) remained very low.

Banks' loan growth in residential housing sector (indicator 6.3a) demonstrated further decline at end-December 2018. Loan growth in commercial housing sector (indicator 6.3b) also decreased compared to

that of end-June 2018. Growth of FIs' loans to housing sector (indicator 6.4) recorded an increase during the same period.

An increasing trend was observed in banks' credit exposure to its major public and private counterparts (indicator 6.5), in which NFCs accounted for more than seventy percent. Similarly, NBDCs' loans to NFCs continued to dominate their increasing loan portfolio (indicator 6.6). Banks' cross-border claims (indicator 6.7), though recorded an increase, remained less than one percent of banks' total assets at end-December 2018. NBDCs' cross-border claims (indicator 6.8) also remained very negligible.

7. Structural Risk

Aggregate assets of both domestic banks and foreign banks, as percentages of nominal GDP, (indicator 7.1) recorded an increase at end-December 2018 compared to those of end-June 2018. Similar trend was observed in FIs' aggregate assets to nominal GDP ratio (indicator 7.3). Leverage ratios of both banks and FIs (indicators 7.2 and 7.4) demonstrated an overall upward trend; however, FIs' leverage ratio declined at end-December 2018 compared to that of end-June 2018.

1. Macro risk

## 1.1 Current and forecasted real GDP growth
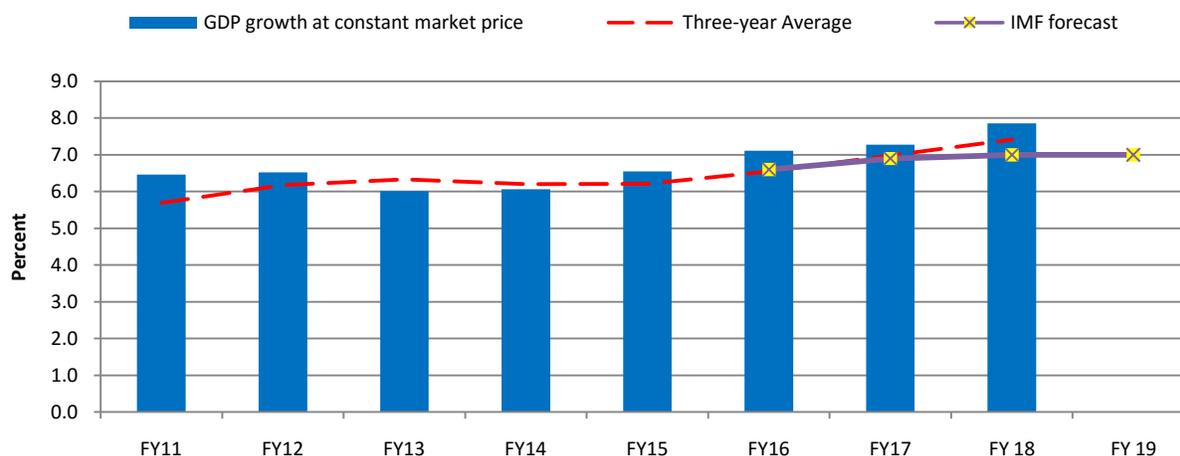

Source: Statistics Department, BB; IMF's World Economic Outlook, April, 2018.
Notes: As half yearly GDP is not calculated in Bangladesh, GDP growth is shown for only fiscal years.

Real GDP growth showed an increasing trend, surpassing the IMF forecast for the fiscal year 2018 (FY18).
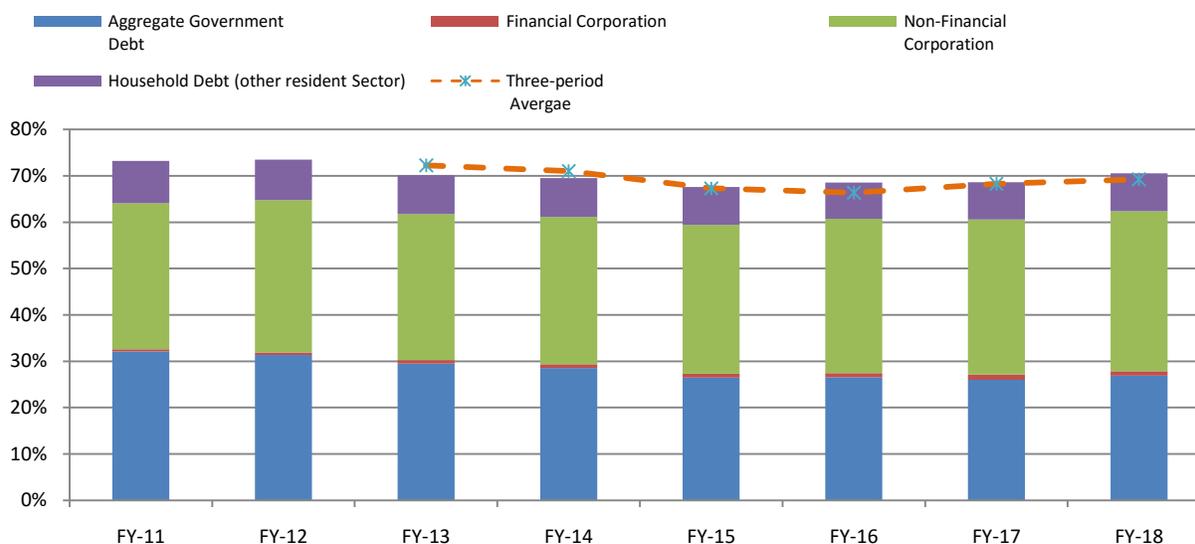

1.2 Current account balance-to-GDP ratio

Source: Monthly Economic Trends, BB.
Note: As half yearly GDP is not calculated in Bangladesh, June based GDP data is used as a proxy for December in calculating current account balance-to-GDP ratio.

Current account balance-to-GDP ratio showed a fluctuating trend during the last couple of years. The ratio became negative since December 2016.

1. Macro risk–Cont'd.

1.3 Aggregate debt-to-GDP ratio

Legend:
- Aggregate Government Debt
- Financial Corporation
- Non-Financial Corporation
- Household Debt (other resident Sector)
- Three-period Avergae

Sources: Bangladesh Economic Review, Ministry of Finance, GoB; Monthly Economic Trends, BB (various issues).

Note: Because of unavailability of half yearly data of GDP, aggregate debt-to-GDP ratio is shown only for fiscal years. Aggregate debt refers to the claims on government, households, financial and non-financial corporation by depository corporations. Government debt includes both domestic and external debt.

Aggregate debt-to-GDP ratio recorded slight increase in FY18 compared to that of FY17. Debts of non-financial corporations and government are the major constituents of aggregate debt.

1.4 Government debt-to-GDP ratio

Legend:
- Domestic debt
- External Debt
- Three-Period Average

Source: Bangladesh Economic Review, Ministry of Finance, GoB; Monthly Economic Trends, BB.

Notes: Because of unavailability of half yearly data of GDP, government debt-to-GDP ratio is shown only for fiscal years.

Domestic government debt constitutes major portion of aggregate government debt. Government debt-to-GDP ratio slightly increased in FY18 compared to that of FY17.

1. Macro risk–Cont'd.

1.5 Government deficit-to-GDP ratio
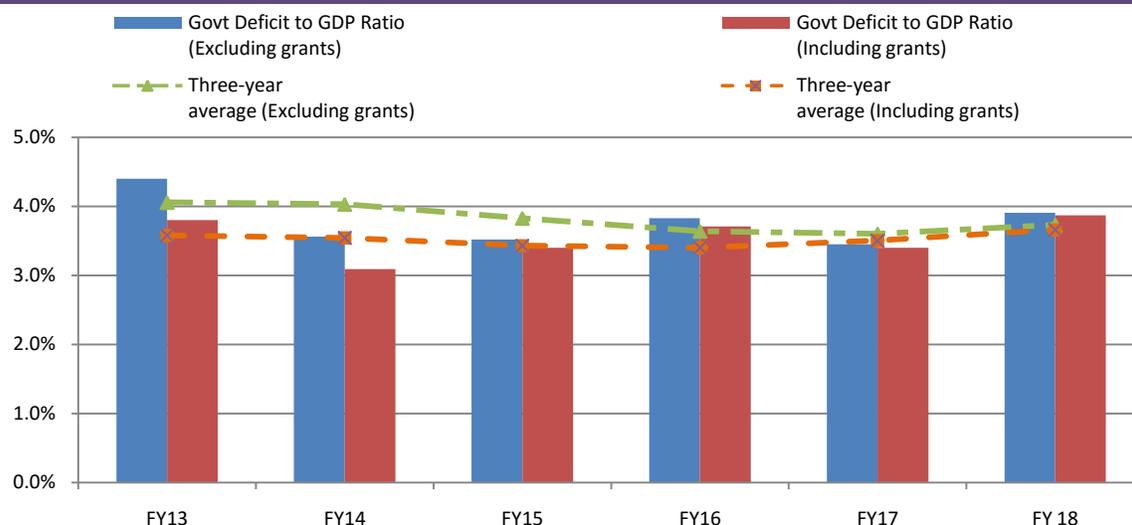

Source: Monthly Report on Fiscal Position, Government of Bangladesh (GoB), March'2018 and various prior issues.
Notes: Because of unavailability of half yearly data of both government deficit and GDP, government deficit-to-GDP ratio is shown for fiscal years only. Actual figures of government deficit are used here.

Government deficit-to-GDP ratio, both including and excluding grants, increased in FY18 compared to the preceding fiscal year.

## 1.6 Household debt-to-gross disposable national income ratio
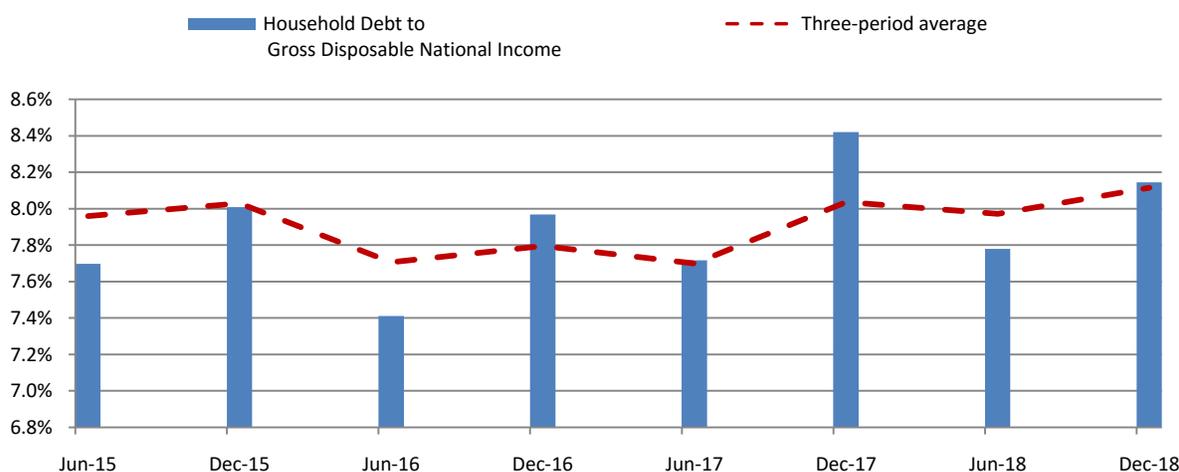

Sources: Monthly Economic Trends, BB (various issues).
Notes: As half yearly gross disposable national income is not calculated in Bangladesh, June based data of gross disposable national income is used for both June and December in calculating household debt-to-gross disposable national income ratio.

Household debt-to-gross disposable national income increased in December 2018 compared to that of June 2018. However, compared to end-December 2017 the ratio slightly decreased.

1. Macro risk–Cont'd.

## 1.7 Non-financial Corporation (NFC) debt-to-GDP ratio
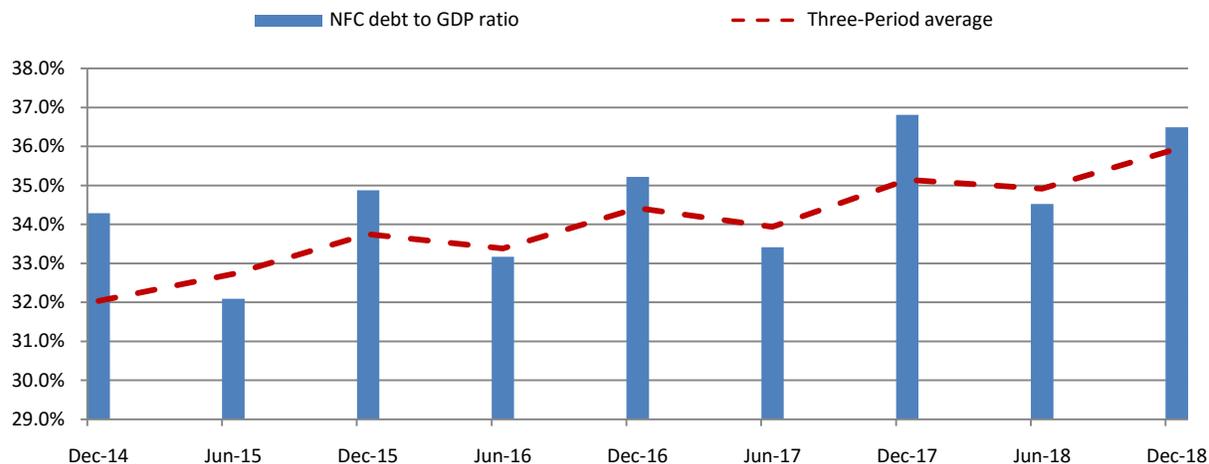

Sources: Monthly Economic Trends, BB (various issues).
Notes: NFC debt includes debts of both public and private NFCs. As half yearly GDP is not calculated in Bangladesh, June based GDP data is used as a proxy for December in calculating the ratio.

Private non-financial corporations' (NFCs) debt comprises major portion of aggregate NFCs' debt. NFCs' debt-to-GDP ratio increased by 2.0 percentage points in end-December 2018 compared to the end-June 2018 position and decreased by 0.32 percentage point from that of end-December 2017.

2. Credit risk

## 2.1 Annual growth rate of banks' loans to households
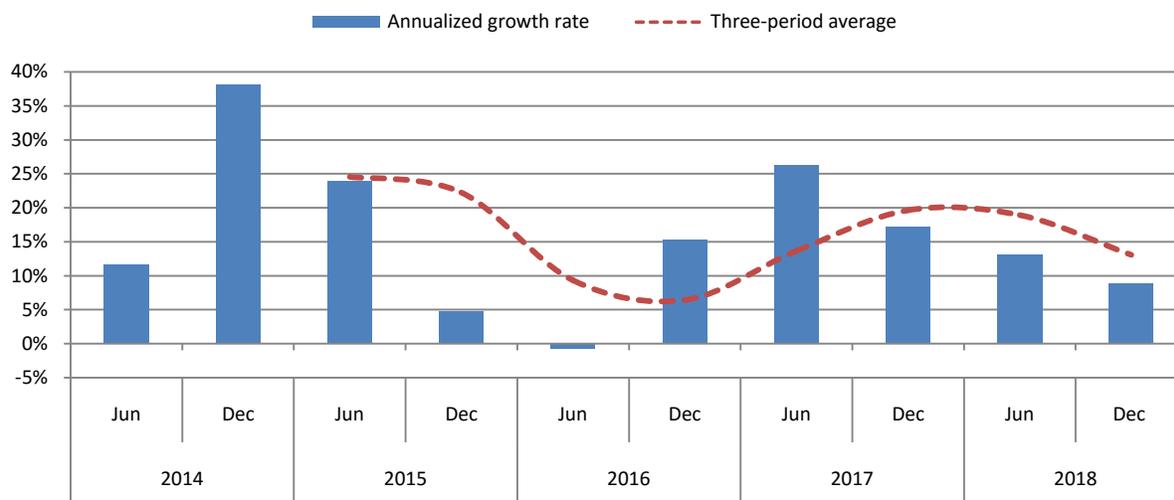

Source: Statistics Department, BB.

Notes: Data for December 2018 are provisional. Loans refer to outstanding loans and advances extended to domestic households (individuals) excluding bills.

An overall downward trend in growth of household loans is observed since June 2017.

2.2 Annual growth rate of NBDCs' loans to households

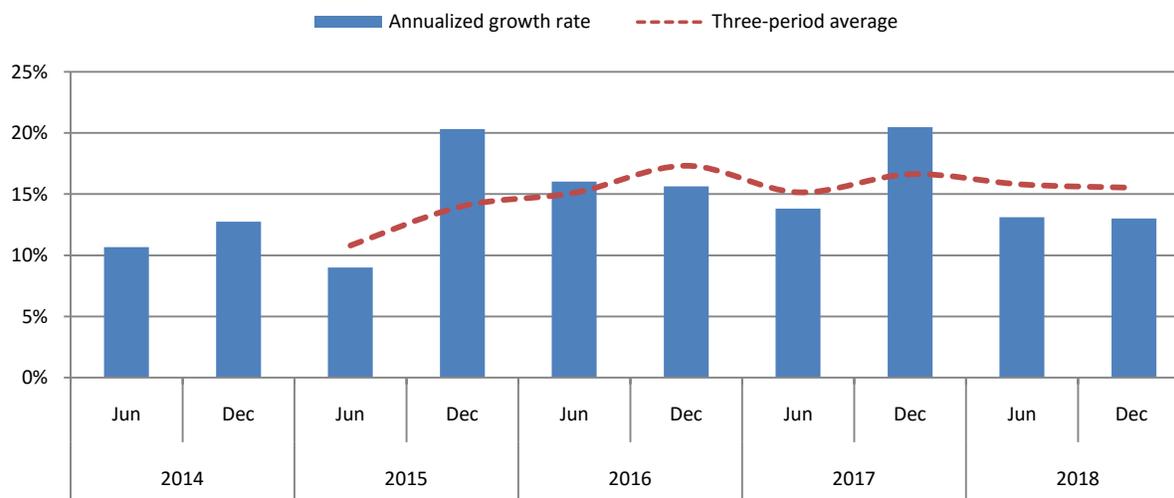

Source: Statistics Department, BB.

Notes: NBDCs include deposit taking FIs[2], Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, Grameen Bank and cooperative banks.

NBDCs' loan growth to household sector also maintained an overall downward trend since June 2017.

---

[2] FIs refer to non-bank financial institutions. Out of 34 FIs, 29 are deposit taking FIs.

2. Credit risk–Cont'd.

## 2.3 Annual growth rate of banks' loans to non-financial corporation (NFC)

Source: Statistics Department, BB.

Notes: Data for December 2018 are provisional. Loans refer to outstanding loans and advances extended to private NFCs excluding bills.

Banks' loan growth to private NFCs recorded a slowdown at end-December 2018 after recording a strong growth at end-December 2017.

## 2.4 Annual growth rate of NBDCs' loans to non-financial corporation (NFC)
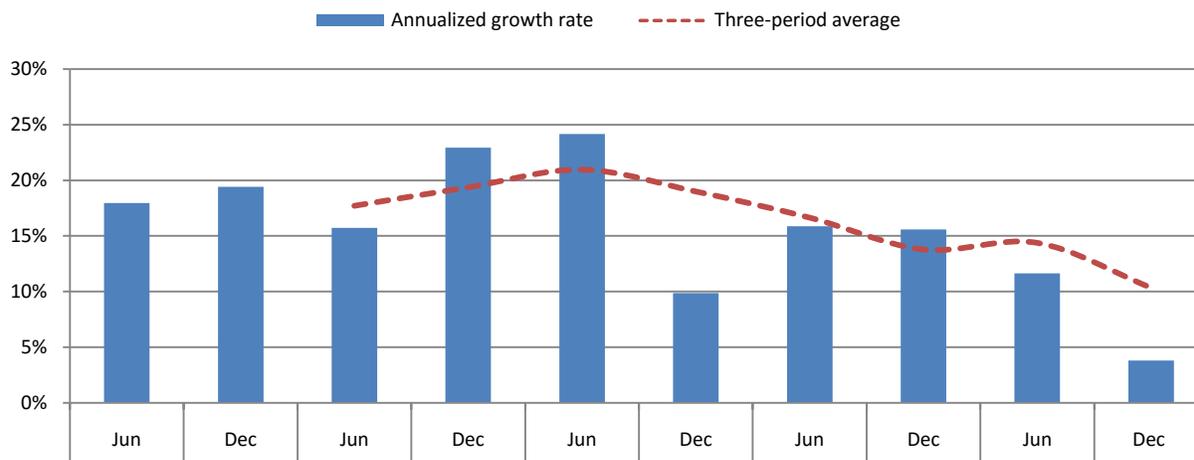

Source: Statistics Department, BB.

Notes: NFC refers to private NFCs only. NBDCs include deposit taking FIs, Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, Grameen Bank and cooperative banks.

Growth rate of NBDCs' loans to private NFCs also slowed down further in the second half of 2018.

13

2. Credit risk–Cont'd.

2.5 Provision maintenance ratio of banks
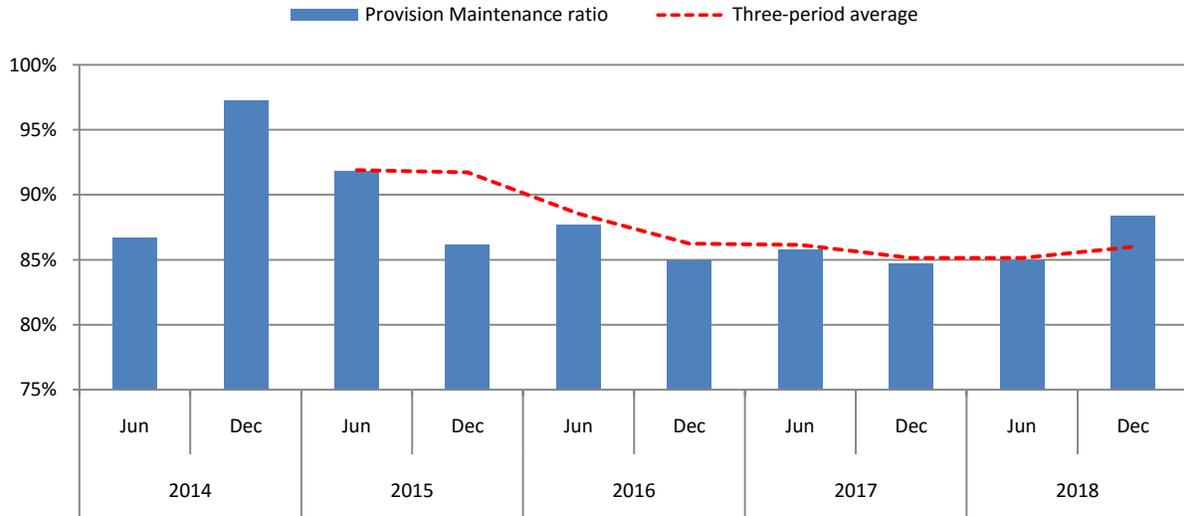

Source: BRPD, BB.
Notes: Provision maintenance ratio refers to maintained provision as a percentage of required provision.

Banks' provision maintenance ratio recorded an increase at end-December 2018.

2.6 Provision maintenance ratio of FIs
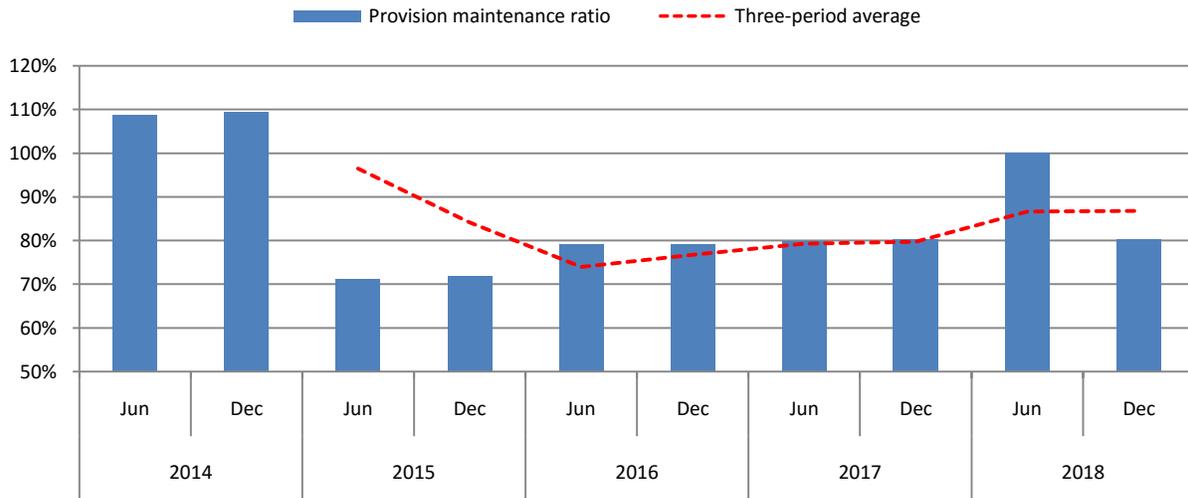

Source: DFIM, BB.
Notes: Due to NBDCs' data unavailability, data of FIs were used which include both deposit takers and non-deposit takers.

FIs' provision maintenance ratio registered a notable decline at end-December 2018 from the preceding period's 100 percent ratio.

2. Credit risk–Cont'd.

2.7 Changes in banks' interest rates for housing loans

a. No. of banks having changes in their interest rates for housing loans

b. Percentage of banks having changes in their interest rates for housing loans
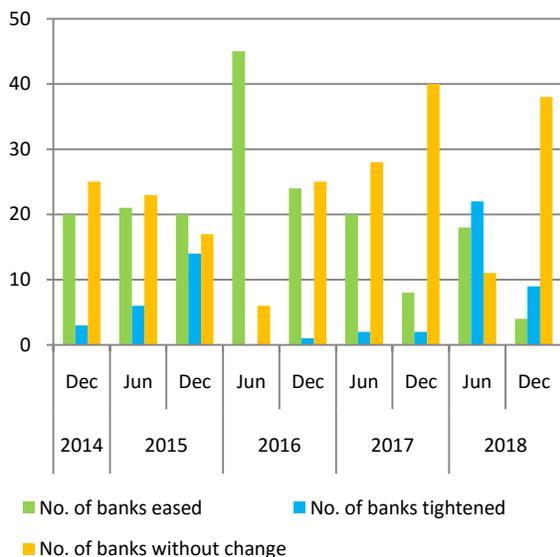

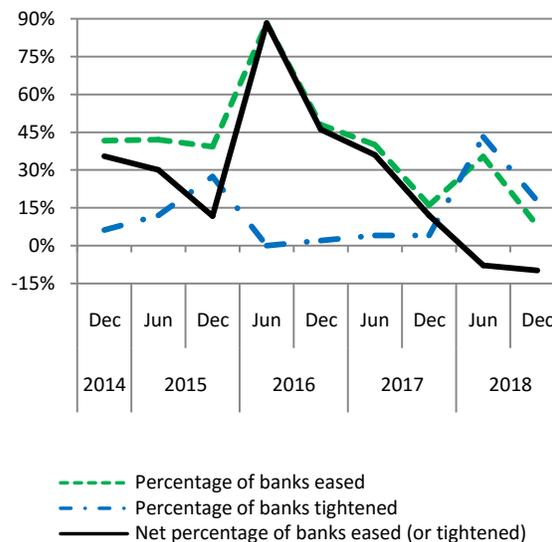

Source: Scheduled bank lending rate, Bangladesh Bank website (https://www.bb.org.bd/fnansys/interestlending.php).

Notes: Changes in banks' announced interest rate for housing loans have been used as a proxy for changes in banks' credit standards. Net percentage change is the difference between the share of banks reporting that interest rates have been eased (decreased) and the share of banks reporting that they have been tightened (increased). A positive net percentage change indicates that a larger proportion of banks have eased credit standards ("net easing"), whereas a negative net percentage change indicates that a larger proportion of banks have tightened credit standards ("net tightening").

In December 2018, 7.8 percent banks eased the interest rates of housing loans while 17.6 percent banks tightened the same; the remaining banks kept their rates unchanged during the same period. Hence, after netting off the impacts of easing, an overall net tightening was observed during this period.

3. Funding and liquidity risk

3.1 Bangladesh Bank's liquidity support to banks
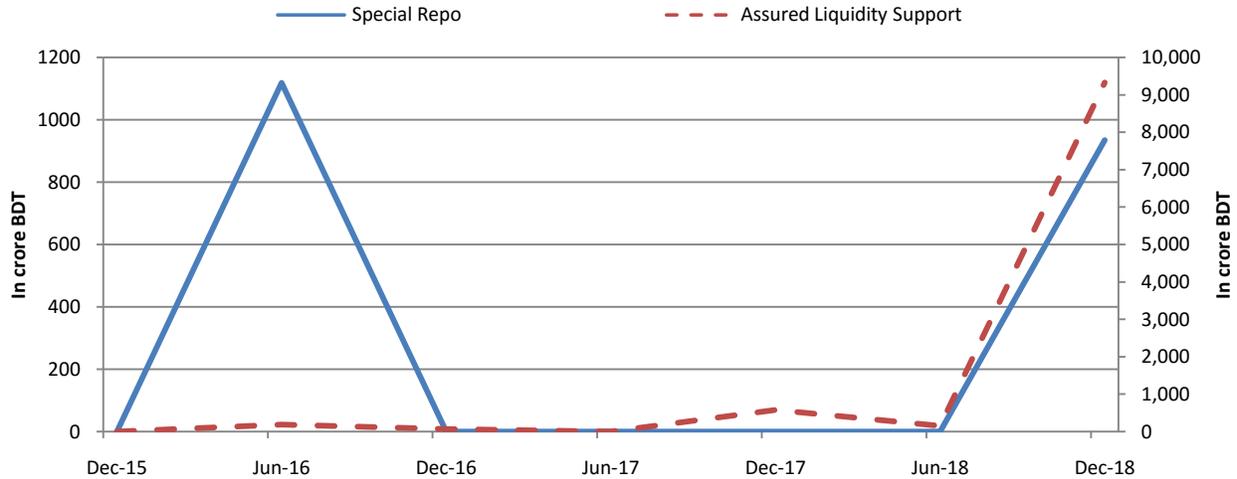

Source: DMD, BB.
Note: LHS represents Assured Liquidity Support and RHS refers to Special Repo.

Assured liquidity support increased significantly in December 2018 from that of end-June 2018 and end-December 2017. Special repo was nil since December 16 to June 18 and increased significantly in December 2018.

3.2 Advance-to-deposit ratio
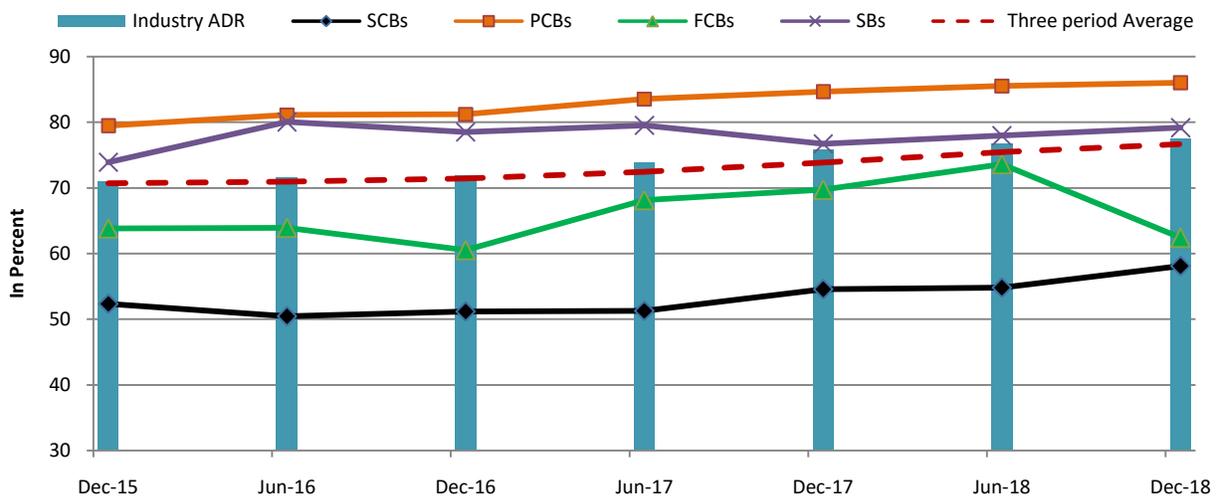

Source: DOS, BB.

Advance-to-deposit ratio (ADR) increased slightly in December 2018, after remaining mostly stable during the last few years. ADRs of PCBs and SBs were higher than the industry average whereas ADRs of FCBs and SCBs were lower.

3. Funding and liquidity risk–cont'd.

3.3 Maturity profile of banks' outstanding debt securities

a. Treasury Bond

Source: DMD, BB.

Notes: The maturity profile refers to the residual maturity of long-term and short-term debt securities issued by Government of Bangladesh. Banks' long-term debt includes government treasury bond with a maturity of more than 12 months. Data are based on amounts outstanding at the end of the corresponding period.
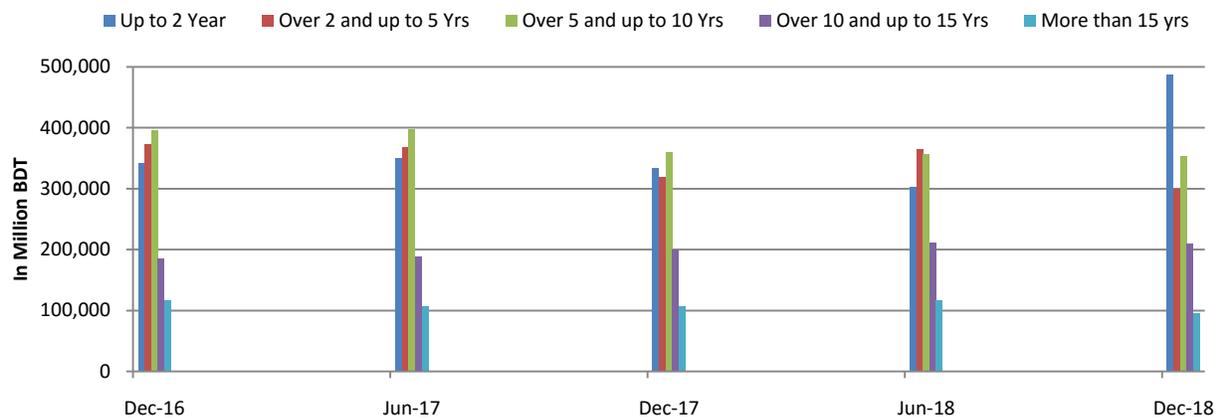

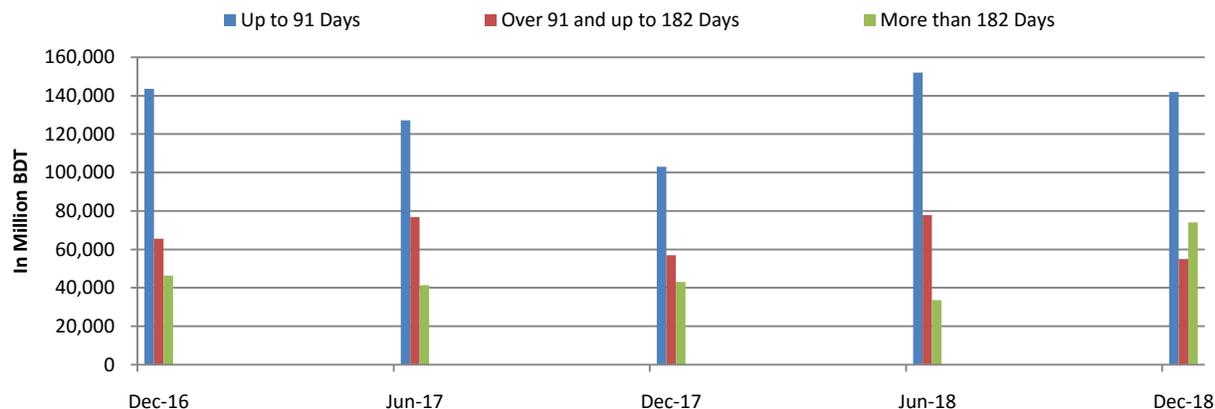

Treasury bonds with remaining maturity up to 2 years remained the largest in terms of volume whereas the ones with remaining maturity of more than 15 years remained the smallest at end-December 2018. Treasury bonds with remaining maturities up to 2 years only increased and all other type of treasury bonds decreased in December 2018 compared to June 2018.

b. Treasury Bill

Source: DMD, BB.

Notes: Banks' short-term debt includes government Treasury bill with a maximum maturity of 12 months. Data are based on amounts outstanding at the end of the corresponding year or month.

Treasury bills with remaining maturity of up to 91 days are the largest in terms of volume and recorded decrease from June 2018. The same with remaining maturity of over 91 days and up to 182 days are the smallest and both decreased from June 2018 and December 2017. However, Treasury bills with remaining maturity more than 182 days increased both from June 2018 and December 2017.

17

3. Funding and liquidity risk–cont'd.

3.4 Subordinated debt
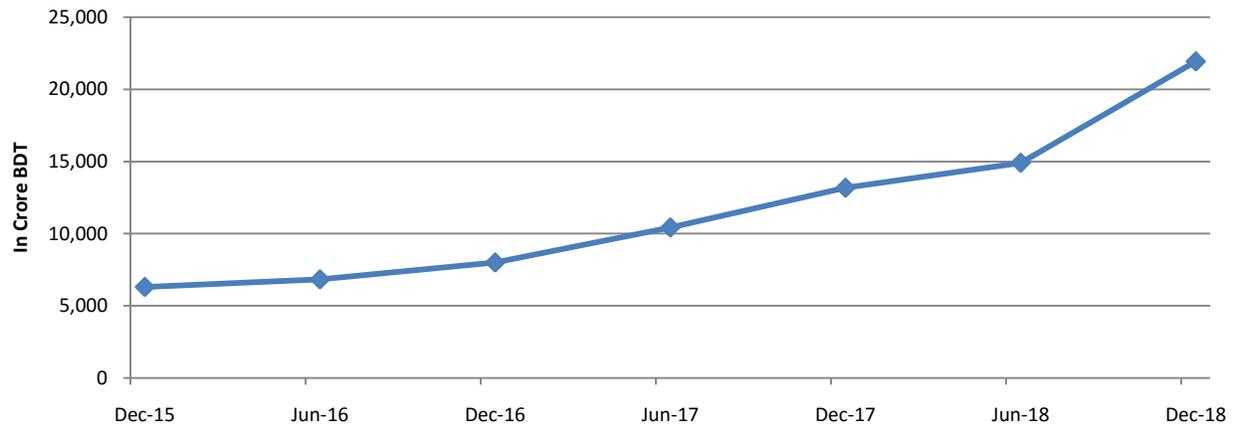

Source: DOS, BB.

Note: Subordinated debts are eligible to be included as Tier 2 Capital for calculating the regulatory capital as per BASEL III Capital Framework.

Subordinated debt, issued by banks, showed an increasing trend since 2015 and jump significantly in December 2018 compared to June 2018. Such increase contributes to the overall capital base of the banking sector.

4. Market risk

4.1 Equity indices
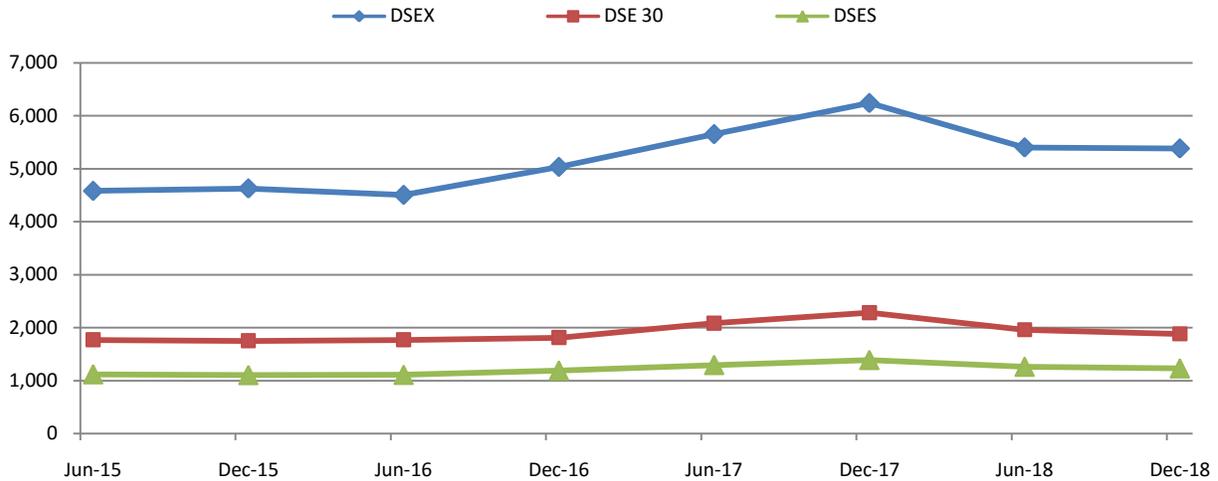

Source: DSE Website.

DSE Broad Index, DSEX, declined slightly at end-December 2018 compared to that of end-June 2018. Other equity indices also declined slightly in the second half of 2018.

4.2 Price/earnings (P/E) ratio
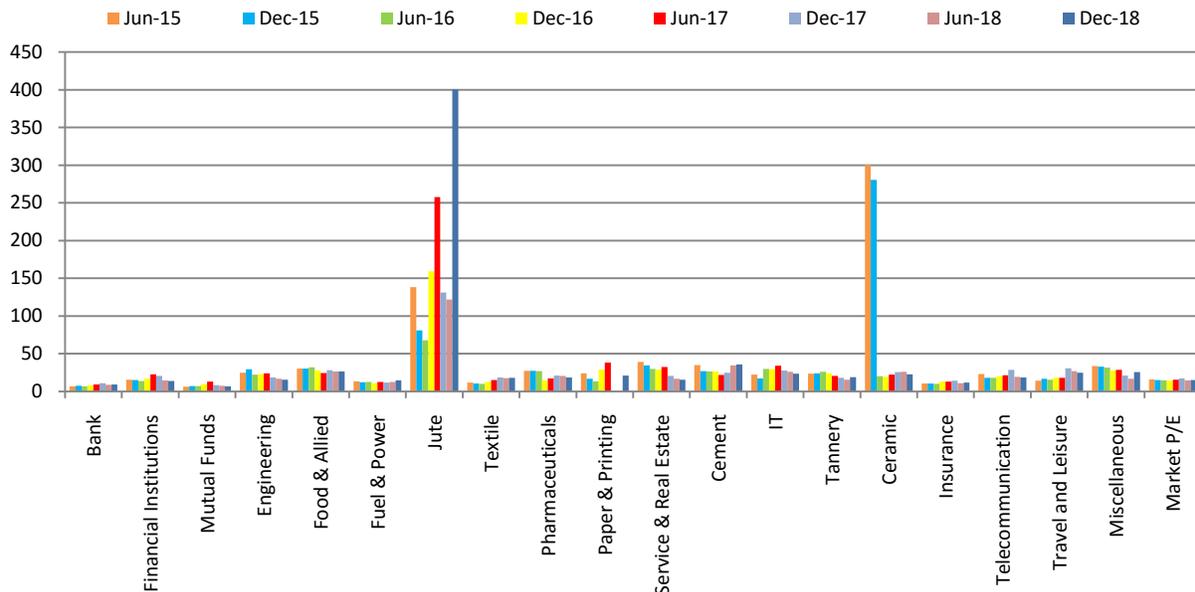

Source: DSE Website.

P/E ratio of all listed sectors remained broadly stable except the jute sector. Market P/E ratio slightly increased at end-December 2018 compared to that of end-June 2018.

4. Market risk–cont'd.

4.3 Weighted average call money market rates
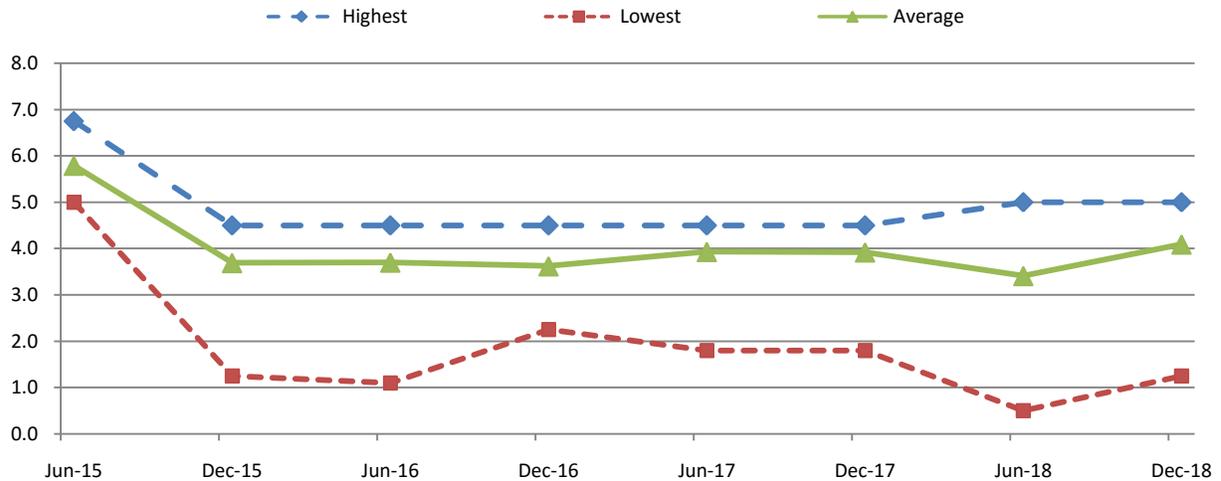

Source: Statistics Department, BB.

Average call money borrowing rate increased slightly at end-December 2018 compared to that of end-June 2018.

4.4 Scheduled banks' weighted average interest rate on deposits and advances
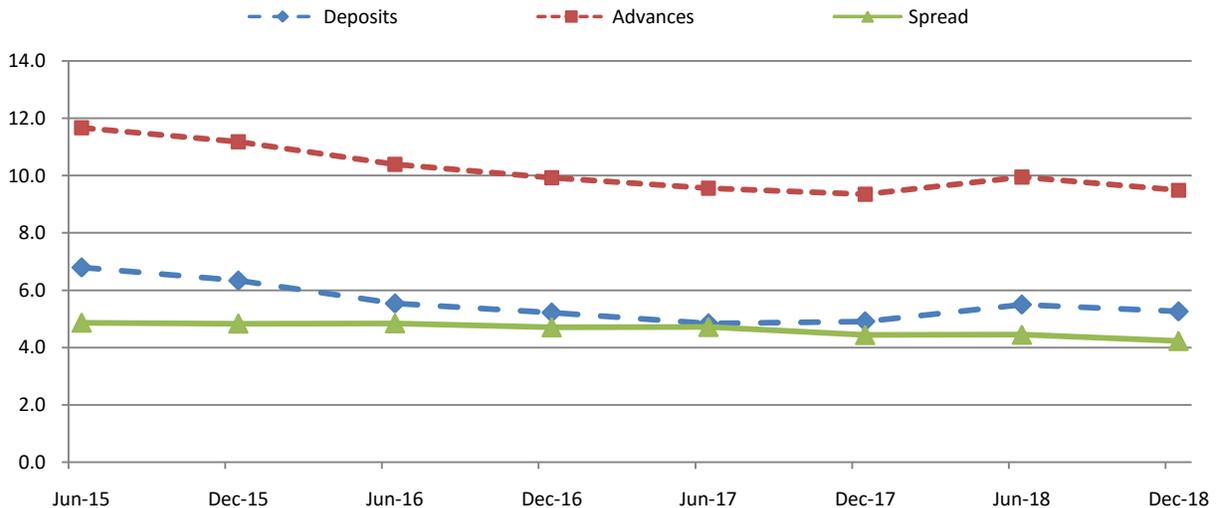

Source: Statistics Department, BB.

Weighted average interest rate on advances and deposits decreased in the second half of 2018 compared to those of first half of 2018. Likewise, the spread showed declining trend.

4. Market risk–cont'd.

4.5 Weighted average exchange rate (BDT/USD)
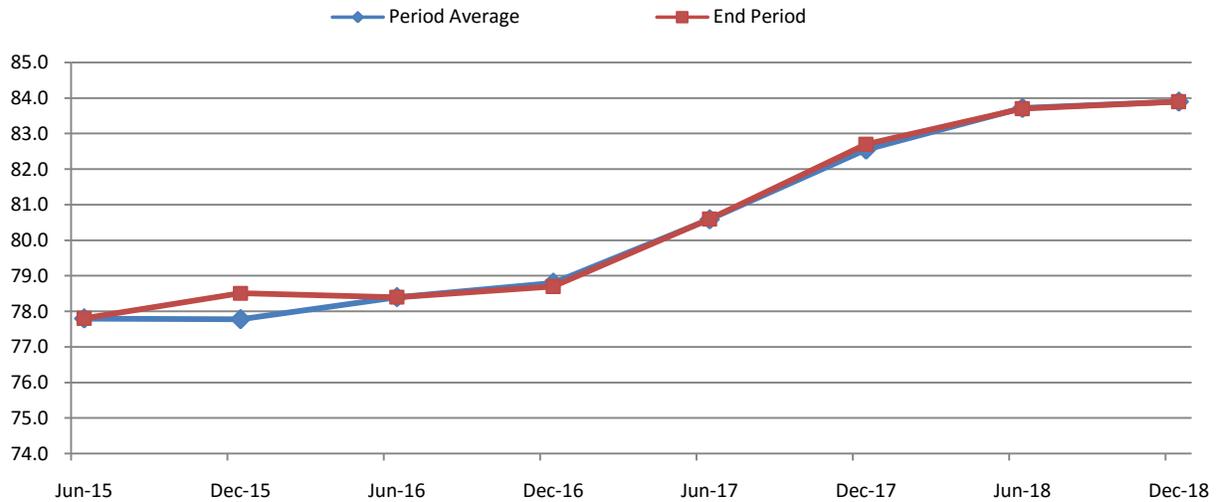

Source: Statistics Department, BB.

The nominal exchange rate (BDT per USD) recorded further depreciation at end-December 2018. However, the depreciation in the review period was much smaller compared to that of the preceding few periods.

5. Profitability and solvency risk

5.1 Banks' profitability indicators

a. Return on equity (ROE)
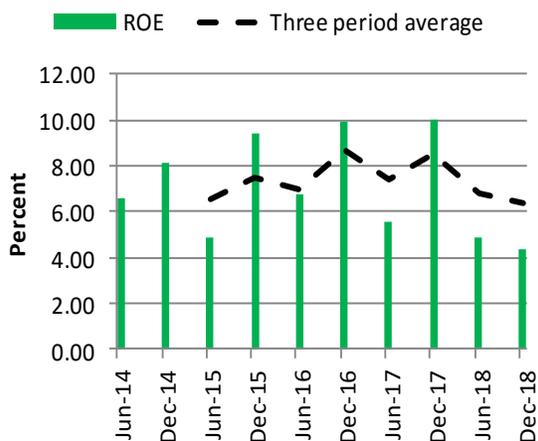

b. Return on assets (ROA)
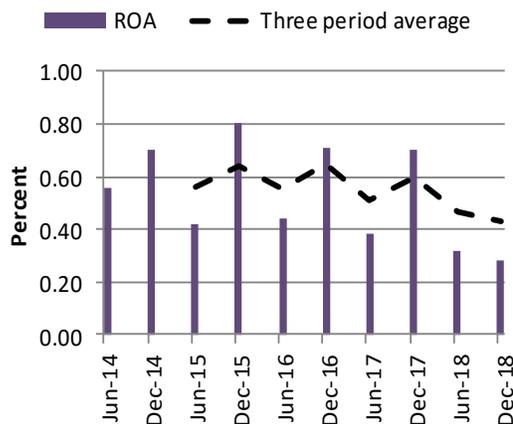

Source: Scheduled Banks; Computation: Financial Stability Department, BB.
Note: End-June ratios are annualized.

Both ROE and ROA declined slightly in December 2018 compared to June 2018 positions.

c. Cost-to-income ratio

d. Net interest income to total operating income ratio
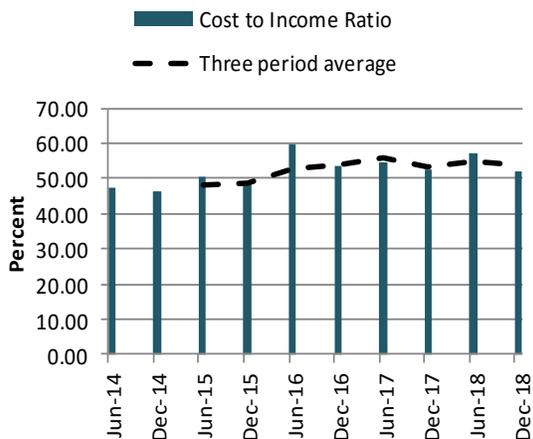

Source: Scheduled Banks; Computation: FSD, BB.
Note: Ratio between operating expenses and total income.

Source: Scheduled Banks; Computation: FSD, BB.

Cost-to-income ratio decreased slightly from the position of June 2018. Net interest income to total operating income ratio continued the upward trend at end-December 2018.
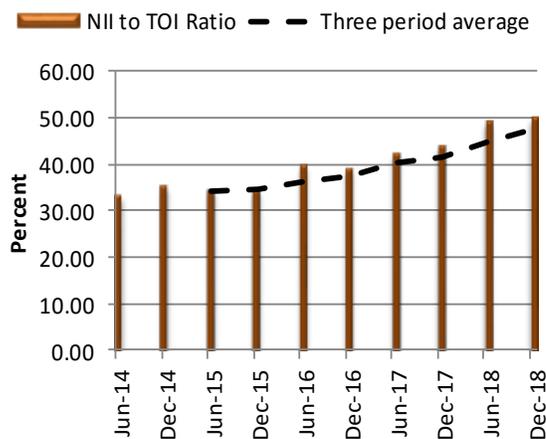

5. Profitability and solvency risk–cont'd.

5.2 Banks' solvency indicators

a. Tier-1 to RWA ratio
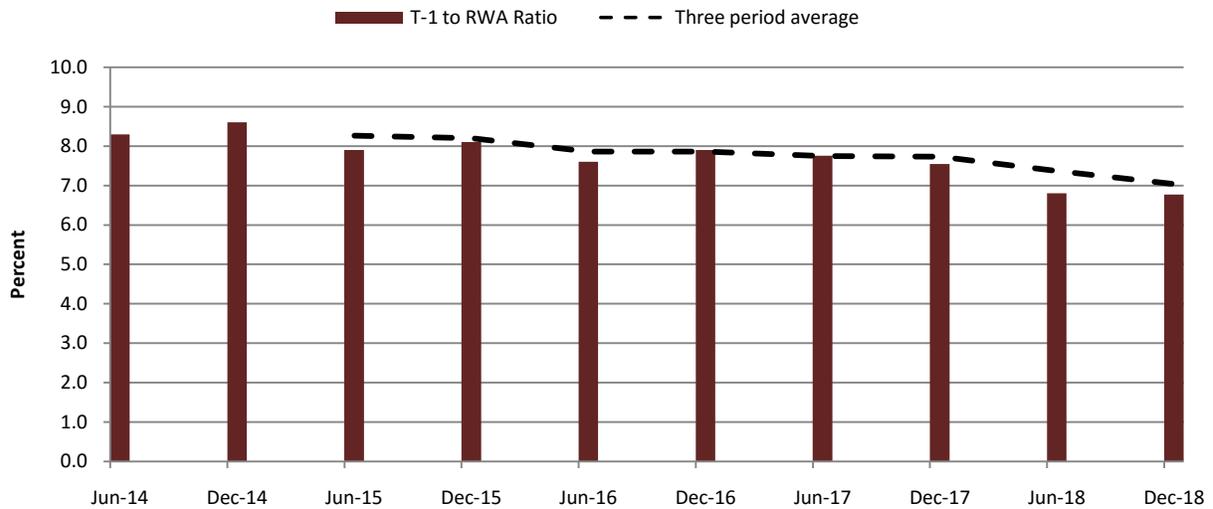

Source: DOS, BB.
Note: Ratio of Tier-1 capital to total risk-weighted assets.

Tier-1 capital ratio slightly decreased in December 2018 from the position of June 2018, but remained above the regulatory requirement of 6.0 percent.

b. Gross non-performing loan (NPL) ratio
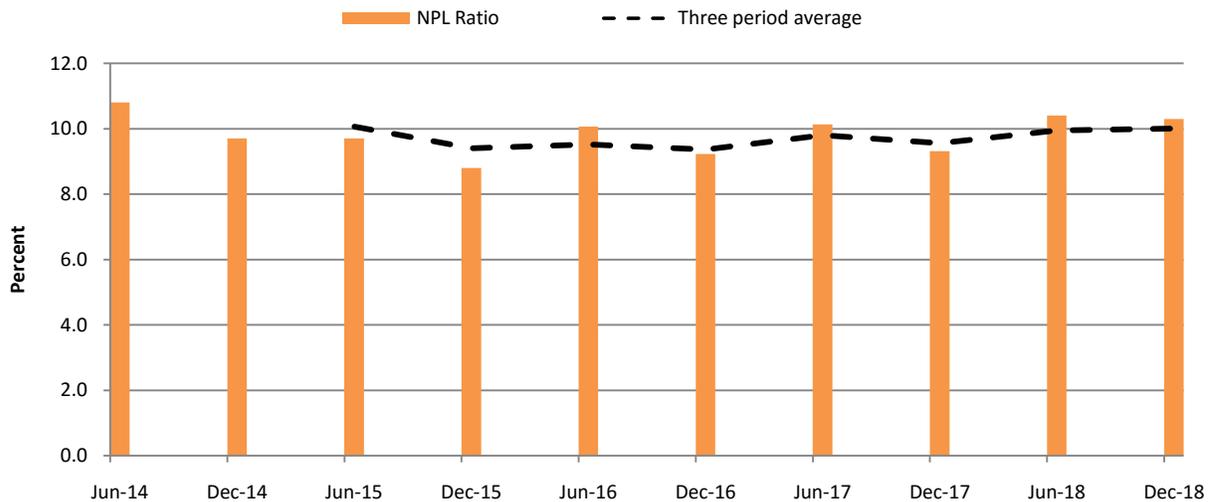

Source: BRPD, BB.
Note: Ratio of non-performing loans & advances to total loans & advances.

The gross NPL ratio decreased slightly at end-December 2018 compared to that of end-June 2018.

5. Profitability and solvency risk–cont'd.

5.3 FIs' profitability indicators

a. Return on equity (ROE)

ROE ▮   — — Three period average

Percent

| 12.00, 10.00, 8.00, 6.00, 4.00, 2.00, 0.00 |

Jun-14, Dec-14, Jun-15, Dec-15, Jun-16, Dec-16, Jun-17, Dec-17, Jun-18, Dec-18

b. Return on assets (ROA)

ROA ▮   — — Three period average

Percent

| 2.00, 1.50, 1.00, 0.50, 0.00 |

Jun-14, Dec-14, Jun-15, Dec-15, Jun-16, Dec-16, Jun-17, Dec-17, Jun-18, Dec-18

Source: DFIM, BB.
Note: End-June ratios are annualized.

FIs' ROE and ROA increased in December 2018 compared to the corresponding values in June 2018.

c. Cost-to-income ratio

Cost to Income Ratio ▮

— — Three period average

Percent

| 0.40, 0.30, 0.20, 0.10, 0.00 |

Jun-14, Dec-14, Jun-15, Dec-15, Jun-16, Dec-16, Jun-17, Dec-17, Jun-18, Dec-18

Source: DFIM, BB.
Note: Ratio between operating expenses and total income.

d. Net interest income to total operating income ratio

NII to TOI Ratio ▮   — — Three period average

Percent

| 1, 0.8, 0.6, 0.4, 0.2, 0 |

Jun-14, Dec-14, Jun-15, Dec-15, Jun-16, Dec-16, Jun-17, Dec-17, Jun-18, Dec-18
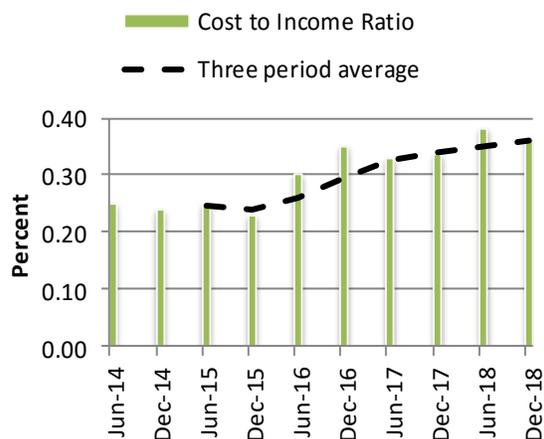

Source: DFIM, BB.

FIs' cost-to-income ratio decreased slightly at end-December 2018 from that of end-June 2018. Net interest income to total operating income ratio remained unchanged at end-December 2018 compared to that of the previous period.
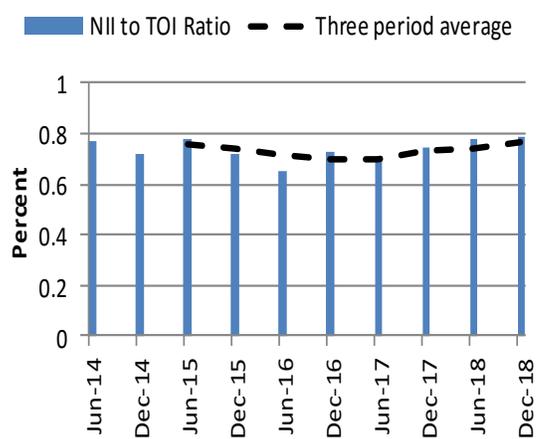

5. Profitability and solvency risk–cont'd.

5.4 FIs' solvency indicators

a. Tier-1 to RWA ratio

T-1 Cap. to RWA ratio — — — **Three period average**
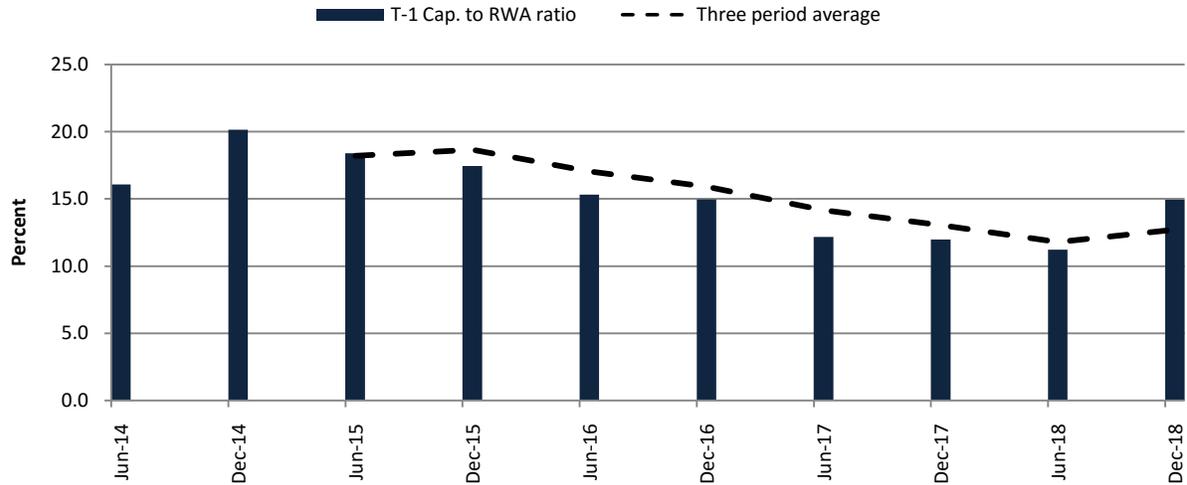

Source: DFIM, BB.
Note: Ratio of Tier-1 capital to total risk-weighted assets.

The ratio increased moderately at end-December 2018 compared to that of end-June 2018 and it was well above the regulatory requirement.

b. Gross non-performing loan (NPL) ratio

NPL Ratio — — — **Three period average**
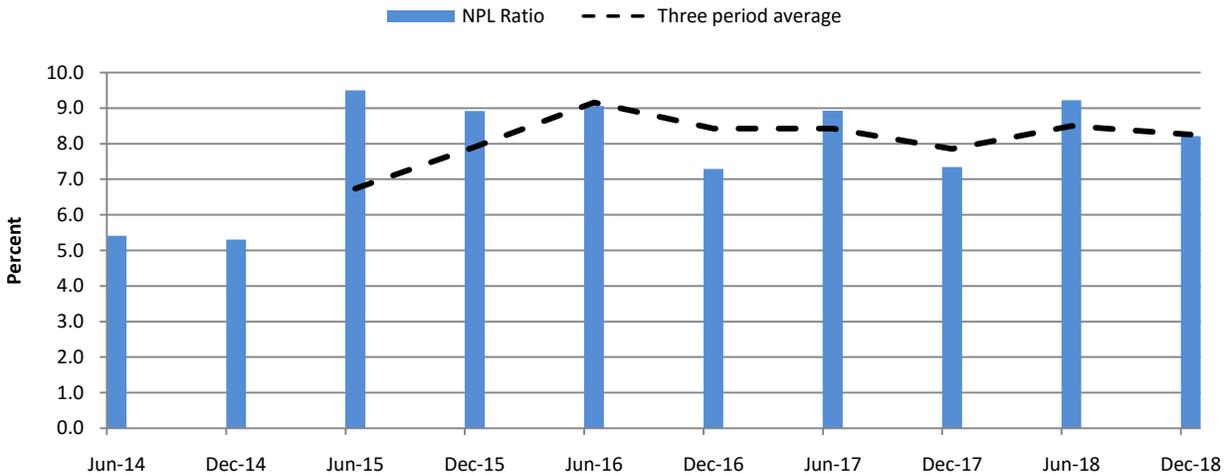

Source: DFIM, BB
Note: Ratio of non-performing loans & leases to total loans &leases.

*The ratio decreased slightly at end-December 2018 compared to end-June 2018 position.*

6. Inter-linkages

6.1 Annual growth rate of banks' credit (gross) to government
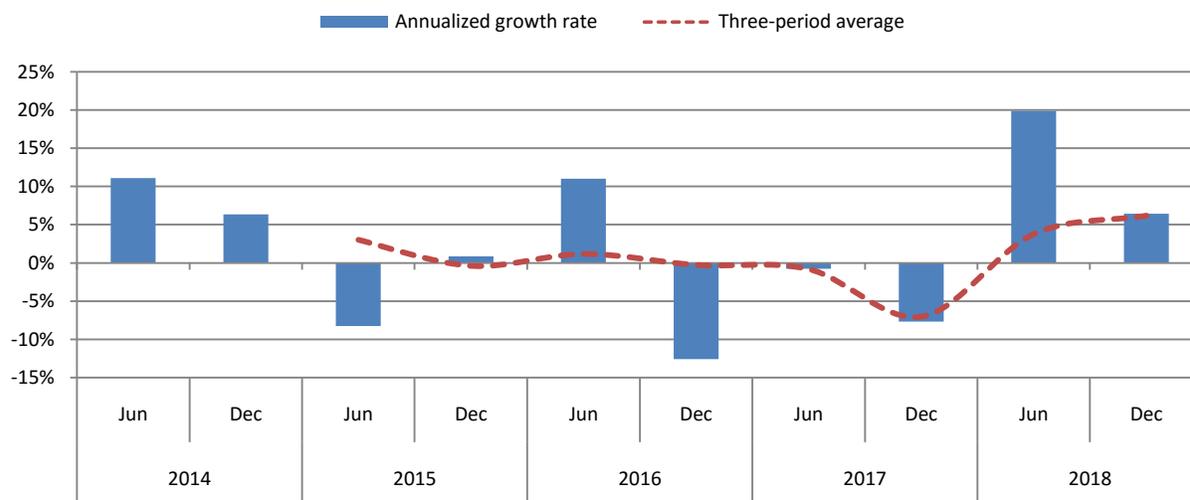

Source: Statistics Department, Bangladesh Bank.
Notes: Credit extended to the government refers to gross amount.

Government borrowings from the banking sector registered positive growth for second consecutive period after remaining negative from December 2016 to December 2017.

6.2 Annual growth rate of NBDCs' credit (gross) to government
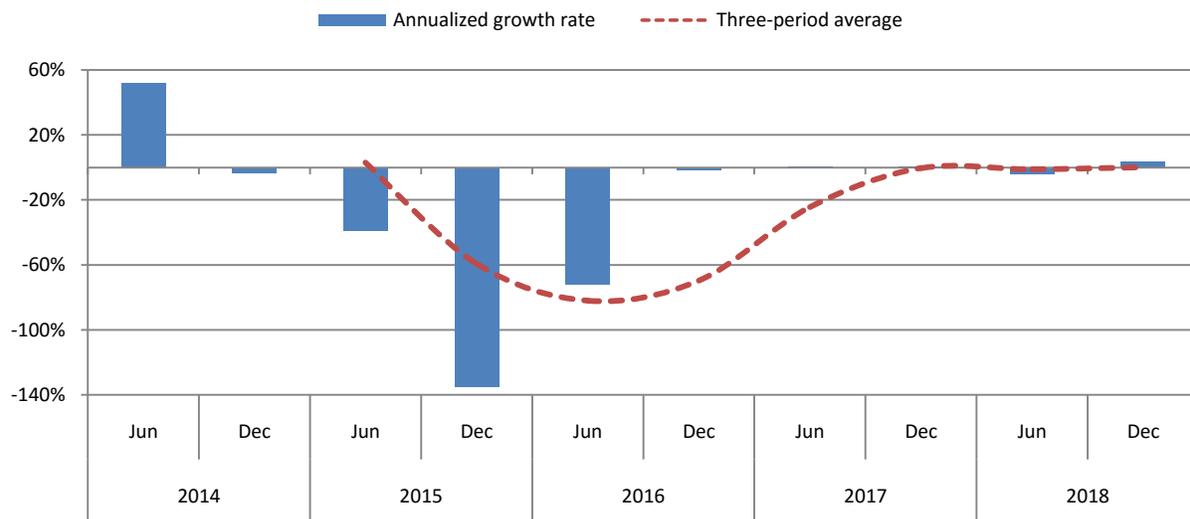

Source: Statistics Department, Bangladesh Bank.
Notes: NBDCs include deposit taking FIs, Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, Grameen Bank and cooperative banks.

Government borrowings from the NBDCs remained negligible at end-December 2018.

6. Inter-linkages– Cont'd.

6.3 Annual growth rate of banks' loans to Housing sector

a. Loans to residential housing

b. Loans to commercial housing
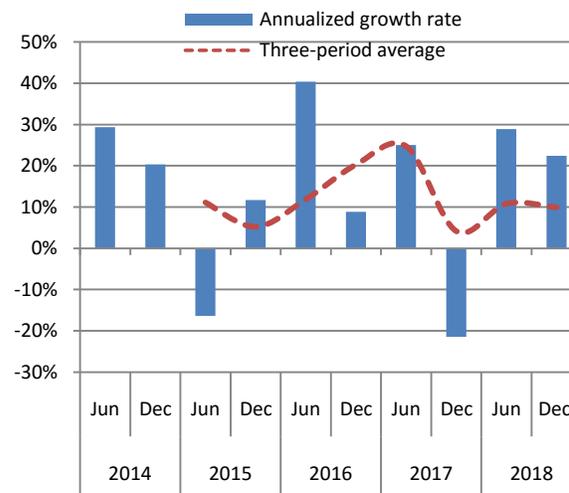

Source: Statistics Department, Bangladesh Bank.

Notes: Data for December 2018 are provisional. Loans refer to outstanding loans and advances excluding bills. Loans to residential housing refer to loans extended to domestic households for house/flat/land purchase and repair/renovation/extension. Loans to commercial housing refer to loans extended to commercial developers/contractors.

Loan growth in residential housing sector demonstrated a slowdown since December 2018. Loan growth in commercial housing sector also declined slightly at end-December 2018.

6.4 Annual growth rate of FIs' loans to Housing sector
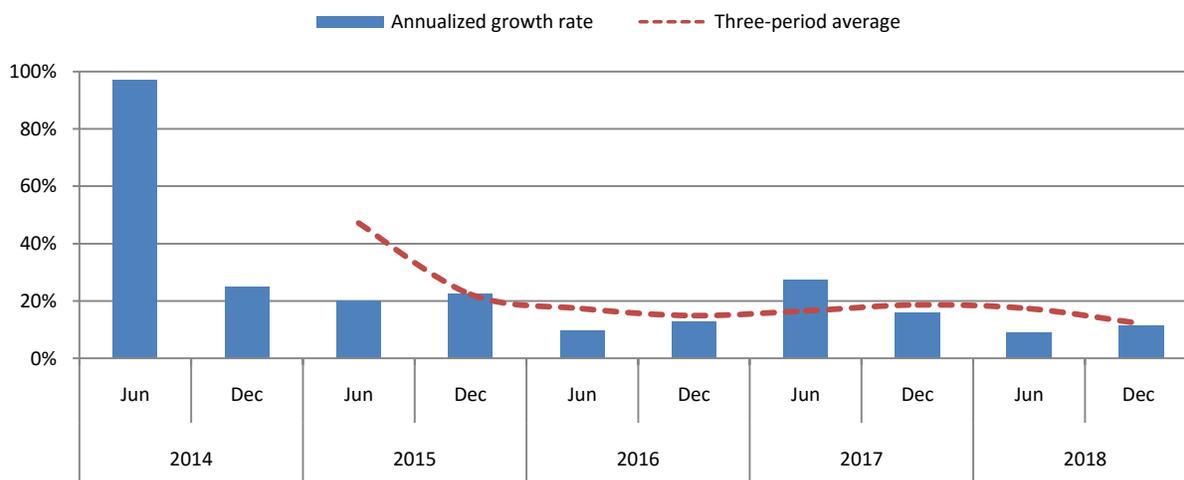

Source: DFIM, Bangladesh Bank.

Notes: Due to NBDCs' data unavailability, data of FIs were used which include both deposit takers and non-deposit takers.

Growth of FIs' loans to housing sector showed an overall downtrend since June 2014.

6. Inter-linkages– Cont'd.

6.5 Banks' loans to counterpart sectors
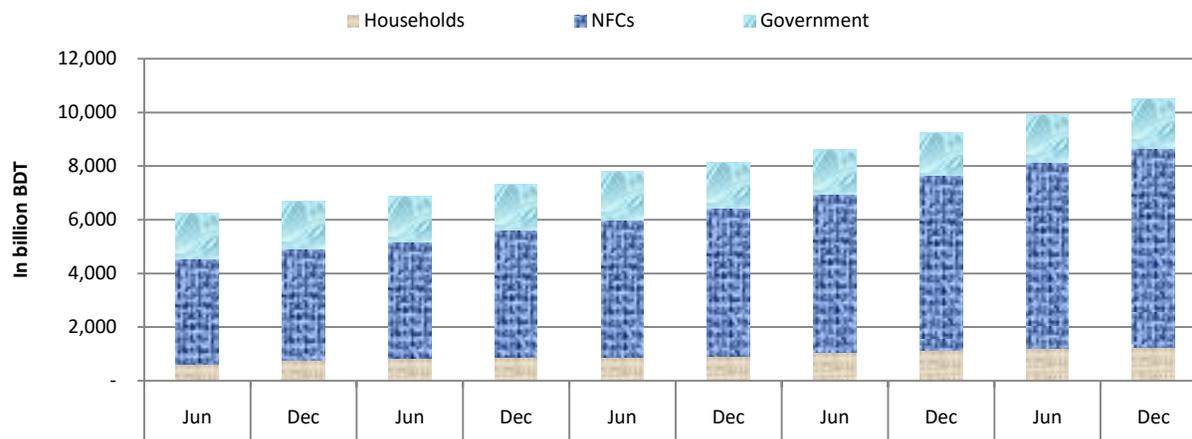

Source: Statistics Department, Bangladesh Bank.
Notes: Data of households and NFCs for December 2018 are provisional. Loans extended to households and NFCs refer to outstanding loans and advances excluding bills. Loans to government refer to gross amount.

Banks' exposures to its major public and private counterparts, led largely by private NFCs, continued its increasing trend.

6.6 NBDCs' loans to counterpart sectors

Source: Statistics Department, Bangladesh Bank.
Notes: Loans to government refer to gross amount. NBDCs include deposit taking FIs, Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, Grameen Bank and cooperative banks.

NBDCs' loan portfolio continued the increasing trend in which NFCs and households accounted for the lion's share.

6. Inter-linkages– Cont'd.

6.7 Banks' cross-border claims
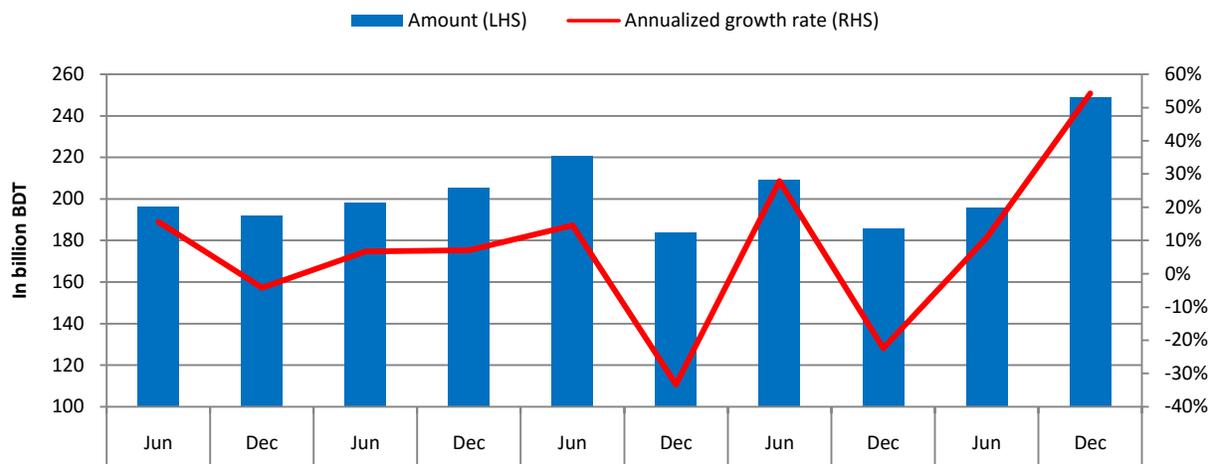

Source: Statistics Department, Bangladesh Bank.
Notes: Cross-border claims include foreign currency notes in hand, balances with banks abroad, bilateral trade credits, wage earners' balance abroad, foreign bills, foreign direct investment, portfolio investment.

Banks' cross-border claims, though increased at end-December 2018, remained low accounting for less than one percent of total assets of the banking sector.

6.8 NBDCs' cross-border claims
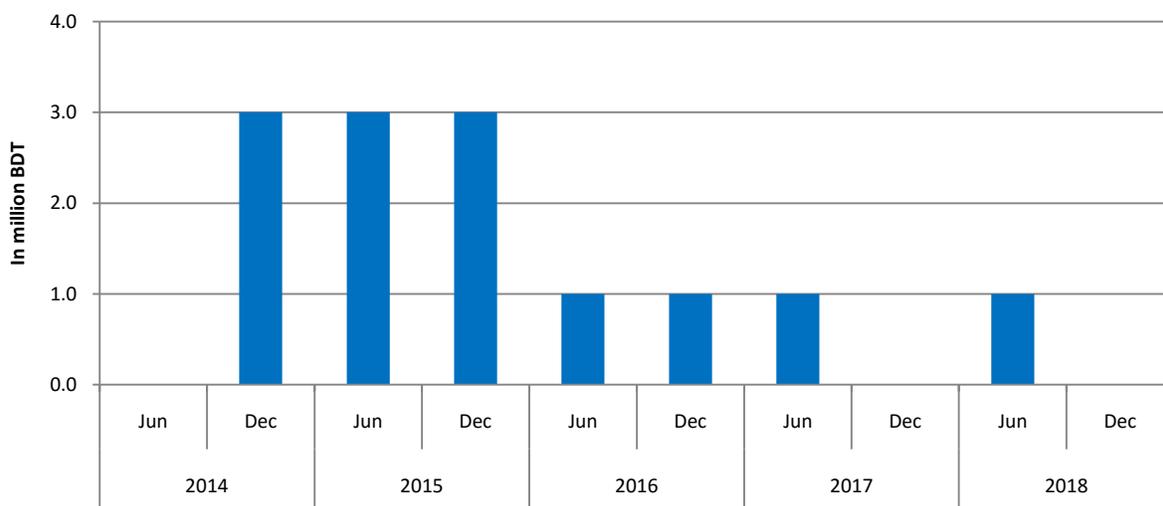

Source: Statistics Department, Bangladesh Bank.
Notes: Claims include only foreign currency notes in hand. No other claims have been generated yet. NBDCs include deposit taking FIs, Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, Grameen Bank and cooperative banks.

NBDCs' cross-border claims remained almost non-existent at the end of December 2018.

7. Structural risk

7.1 Banking sector size
a. Domestic Banks
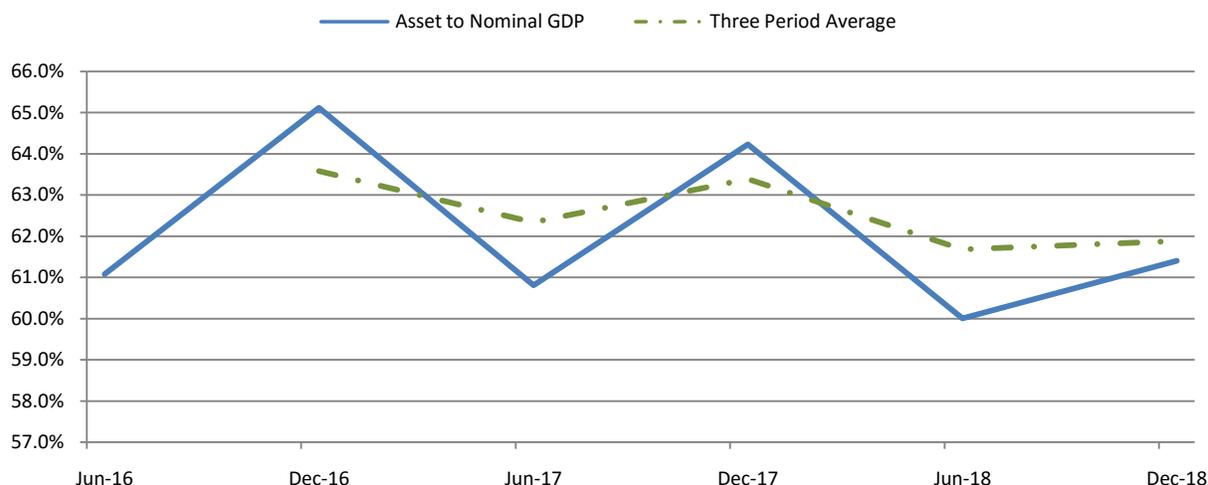

Source: Compilation (Aggregate B/S account of the domestic banks) FSD, BB; Monthly Economic Trends, BB.
Note: Ratio of domestic banks total assets to Nominal GDP. As half yearly GDP is not calculated in Bangladesh, June based GDP data is used as a proxy for December in calculating this ratio.

Domestic banks' total assets to nominal GDP ratio, fluctuating over time, increased slightly in December 2018 compared to the June 2018.

b. Foreign Banks
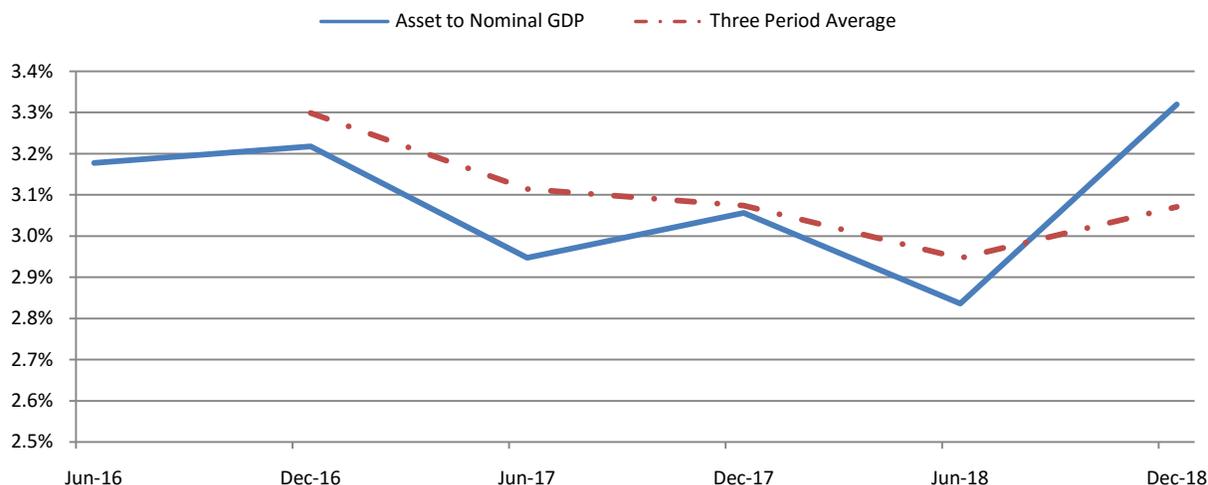

Source: Compilation (Aggregate B/S account of the foreign banks) FSD, BB; Monthly Economic Trends, BB
Note: Ratio of Foreign banks total assets to Nominal GDP. As half yearly GDP is not calculated in Bangladesh, June based GDP data is used as a proxy for December in calculating this ratio.

Foreign banks' total assets to nominal GDP fluctuating over time, Though the ratio decreased slightly in June 2018, compared to December 2017, it again increased in December 2018.

7. Structural risk–cont'd.

7.2 Banking sector leverage
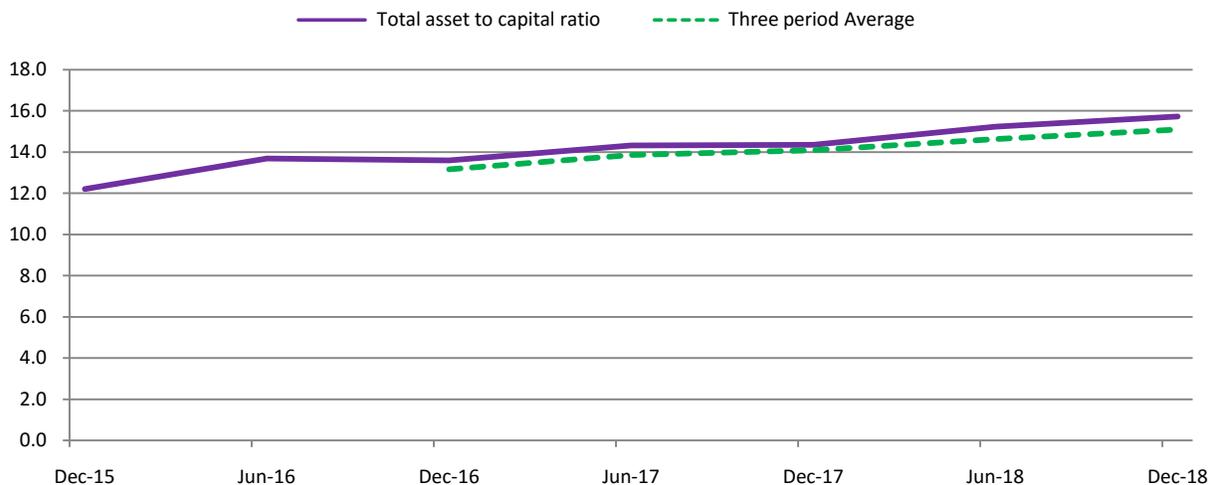

Source: Compilation (Aggregate B/S account of the domestic banking industry) FSD, BB.
Note: Leverage ratio is defined as total asset of the banking sector to capital ratio.

Banking sector's total assets to capital ratio showed increasing trend during the last few years; the ratio increased slightly in December 2018 compared to June 2018.

7.3 Financial institutions (FIs) sector size

FIs' assets to nominal GDP
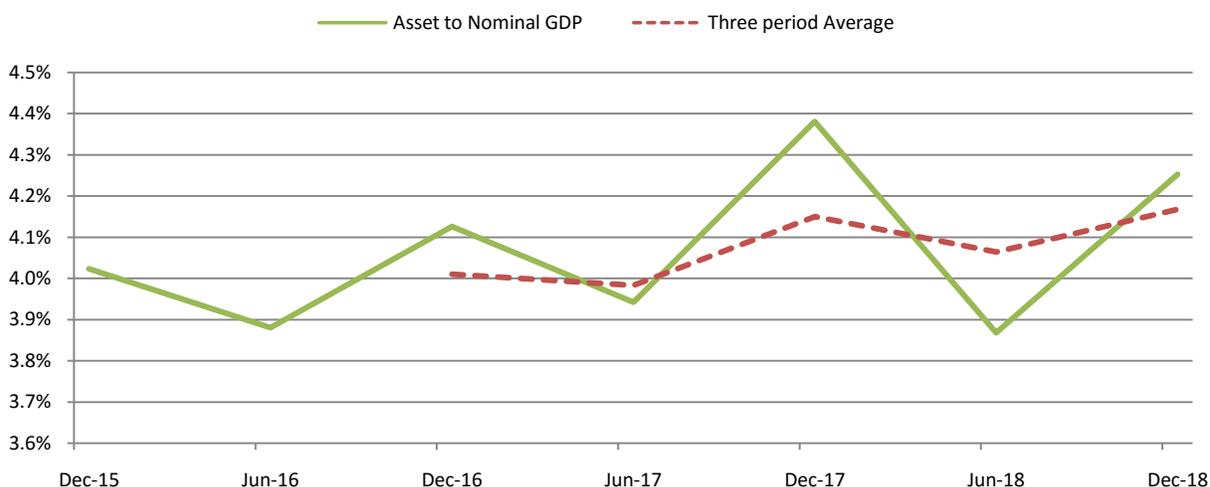

Source: FIs; Compilation, FSD, BB.
Note: Ratio of total asset of financial institutions to nominal GDP. As half yearly GDP is not calculated in Bangladesh, June based GDP data is used as a proxy for December in calculating this indicator.

Financial institutions' assets to nominal GDP, fluctuating over time, increased moderately in December 2018 compared to June 2018 and decreased slightly compared to December 2017.

7. Structural risk–cont'd.

7.4 Financial institutions (FIs) sector leverage
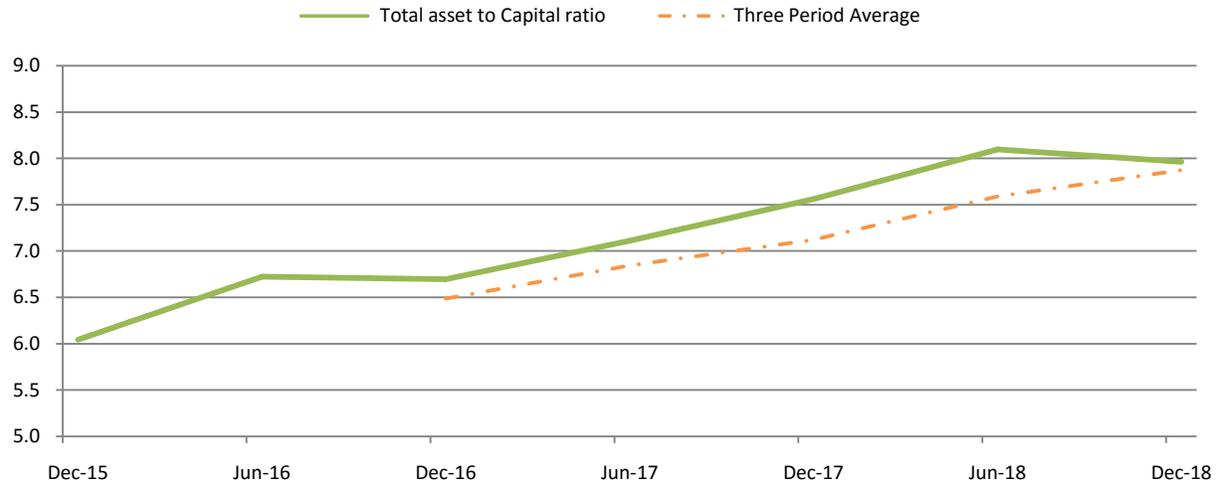

Source: FIs; Compilation, FSD, BB.
Note: Leverage ratio is defined as the total asset of the FIs sector to capital ratio.

Financial institutions' total assets to capital ratio recorded slight decrease in December 2018 compared to June 2018.

1. Macro risk:

1.1 Current and forecasted real GDP growth

Sources: Statistics Department, Bangladesh Bank and IMF World Economic Outlook Update, April 2018.

Current real GDP growth is the latest actual financial year-on-year growth at constant market price**.** Average of three periods is the three-year moving average of GDP growth rate. Forecasted real GDP growth rate is taken from IMF's World Economic Outlook Update, April 2018.

1.2 Current account balance-to-GDP ratio

Sources: Monthly Economic Trends, BB.

Current account balance represents the sum of the 6 months' current account balances. GDP is at current market price. Average of three periods is the three-period moving average of current account balance-to-GDP ratio.

1.3 Aggregate Debt-to-GDP ratio

Sources: ERD, Ministry of Finance and Monthly Economic Trends of BB (various issues).

The aggregate debt as percentage of GDP represents the sum of the debt-to-GDP ratio of Financial, Non-Financial Corporations, Government, as well as households sectors (other resident sector).

1.4 Government debt-to-GDP ratio

Sources: ERD, Ministry of Finance; and Monthly Economic Trends of BB (various issues).

Government debt includes both domestic government debt and local authorities and external debt. Local authorities include City Corporations, Zilla Parisad, Municipalities, Thana/Upazila Parishad, Union Parishad, Gram Parishad and Other Local Bodies. The dotted line represents three-period moving average of the government debt-to-GDP ratio.

1.5 Government deficit-to-GDP ratio

Sources: Monthly Report on Fiscal Position (various issues), Ministry of Finance, Government of Bangladesh.

The government deficit-to-GDP ratio is shown as both deficits excluding grants and including grants to nominal GDP.

1.6 Household debt-to-gross disposable income ratio

Sources: Monthly Economic Trends, BB.

Claims on other resident sector has been classified as Household's debts. The resident sector has been classified according to the IMF's Monetary and Financial Statistics Manual (MFSM). Claims on resident sector exclude BB and ODCs (other depository corporations). Household debt-to-gross disposable income ratio represents resident sector loans as a ratio of gross disposable income over the financial year.

1.7 NFC debt-to-GDP ratio

Sources: Monthly Economic Trends, BB.

Debts of both public non-financial corporations and private non-financial corporations are considered for deriving non-financial corporations' debt. Public non-financial corporations are corporations owned or controlled by the Government that produce goods or services for sale to the public at a significant market price whereas private non-financial corporations encompass corporations and quasi corporations engaging primarily in the production of goods and non-financial services for sale to the public at a significant market price (profit motive).

2. Credit Risk:

2.1 Annual growth rate of banks' loans to households

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by banks to domestic households (individual customers); it excludes bills purchased and discounted.

2.2 Annual growth rate of NBDCs' loans to households

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by non-bank depository corporations (NBDCs) to domestic households; NBDCs include financial institutions (FIs), Ansar-VDP Unnayan Bank, Karma Sangsthan Bank, and Bangladesh Samabaya Bank.

2.3 Annual growth rate of banks' loans to NFCs

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by banks to private non-financial corporations (NFCs); it excludes bills discounted and purchased.

2.4 Annual growth rate of NBDCs' loans to NFCs

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by NBDCs to private NFCs.

2.5 Provision maintenance ratio of banks

Source: Banking Regulation and Policy Department, Bangladesh Bank.

It refers to the ratio of loan-loss provision maintained by banks against their required provision. Mentionable that this ratio is calculated on yearly basis.

2.6 Provision maintenance ratio of FIs

Source: Department of Financial Institutions and Market, Bangladesh Bank.

It refers to the ratio of loan-loss provision, maintained by FIs, against their required provision; due to unavailability of data of all NBDCs, provision maintenance ratio of FIs was used as FIs constitute the majority of NBDCs.

2.7 Changes in banks' interest rates for housing loans

Source: Bangladesh Bank website (https://www.bb.org.bd/fnansys/interestlending.php).

It refers to the net percentage change in credit standards for housing loans by banks; changes in banks' announced interest rate for housing loans have been used as a proxy for changes in banks' credit standards; net percentage change is the difference between the share of banks reporting that interest rates have been tightened (increased) and the share of banks reporting that they have been eased (decreased).

3. Funding and liquidity risk:

3.1 Bangladesh Bank's liquidity support to banks

Sources: Debt Management Department, BB.

Bangladesh Bank's liquidity support comprises assured liquidity support and special repo. Assured liquidity support is given against the government securities holding by the banks issued within last 60 days. Special repo is given upon request to BB when there is a possibility of shortfall in CRR.

3.2 Advance-to-deposit ratio

Sources: Department of Off-site Supervision, BB.

It refers to the ratio between total outstanding loans and total deposits of bank clusters/banking industry.

3.3 Maturity profile of banks' outstanding debt securities (treasury bills, treasury bonds)

Sources: Debt Management Department, BB.

The maturity profile refers to the residual maturity of long-term and short-term debt securities issued by the Government of Bangladesh. Banks' long-term debt includes government Treasury bond with a maturity of more than 12 months. Banks' short-term debt includes government Treasury bill with a maximum maturity of 12 months. Data are based on amounts outstanding at the end of the corresponding year or month.

3.4 Subordinated debt

Sources: Department of Off-site Supervision, BB.

The subordinated debt refers to the debt instruments which will be subordinated to deposits and other liabilities of the bank. It implies that the claims of the subordinated debt holders will be junior to the claims of the depositors and the other creditors.

4. Market risk:

4.1 Price/earnings ratio of equity indices

Sources: Dhaka Stock Exchange Website (http://www.dsebd.org).

The indices used are for Banks, Financial Institutions, Mutual Funds, Engineering, Food & Allied, Fuel & Power, Jute, Textile, Pharmaceuticals, Paper & Printing, Service & Real Estate, Cement, IT, Tannery, Ceramic, Insurance, Telecommunication, Travel and Leisure, Miscellaneous and Market P/E.

4.2 Equity indices

Sources: Dhaka Stock Exchange Website (http://www.dsebd.org)

The equity indices displayed are DSEX, DSE30 and DSES. DSEX is considered as the benchmark general index of the market as it shows the exact price movement of the listed companies. As for DSE30, 30 companies based on profitability, market capitalization and share size were selected, with the companies changed every six months on the basis of performance. DSES index is launched for people and institutions willing to invest in Shari'ah-compliant securities and products.

4.3 Weighted average call money market rates

Source: Statistics Department, BB.

The indicators reflect the nature of money market and include rate charged against exposures of scheduled banks and FIs with one another.

4.4 Scheduled banks' weighted average interest rate on deposits and advances

Source: Statistics Department, BB.

The indicators reflect the condition of scheduled banks and show the difference between average yields received from advances and average rate paid on deposits.

4.5 Weighted average exchange rate (BDT/USD)

Source: Statistics Department, BB.

The indicator reflects the exchange rate movement in BDT per US Dollar.

5. Profitability and solvency risk:

5.1 Banks' profitability indicators

a. Return on equity (ROE)

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio between profit/loss for the period and total equity. End-June ratios are annualised.

b. Return on assets (ROA)

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on ratio between profit/loss for the year and total assets. End-June ratios are annualised.

c. Cost to income ratio

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio between operating expenses and total income. End-June ratios are annualised.

d. Net interest income to total operating income ratio

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio between net interest income and total operating income. End-June ratios are annualised.

5.2 Banks' solvency indicators

a. Tier-1 capital to risk-weighted assets ratio

Source: Department of Off-site Supervision, BB.

The indicator is based on the ratio between Tier-1 capital and total risk exposure amount.

b. Gross non-performing loan (NPL) ratio

Source: Banking Regulation and Policy Department, BB.

The indicator is based on the ratio between non-performing loans and advances to total outstanding loans and advances.

5.3 FIs' profitability indicators

a. Return on equity (ROE)

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on the ratio between profit/loss after tax and provision for the period and total equity. End-June ratios are annualised.

b. Return on assets (ROA)

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on ratio between profit/loss after tax and provision for the year and total assets. End-June ratios are annualised.

c. Cost to income ratio

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on the ratio between operating expenses and total income. End-June ratios are annualised.

d. Net interest income to total operating income ratio

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on the ratio between net interest income and total operating income. End-June ratios are annualised.

5.4 FIs' solvency indicators

a. Tier-1 capital to risk-weighted assets ratio

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on the ratio between Tier-1 capital and total risk exposure amount.

b. Gross non-performing loan (NPL) ratio

Source: Department of Financial Institutions and Markets, BB.

The indicator is based on the ratio between non-performing loans and advances to total loans and advances.

6. Inter-linkages:

6.1 Annual growth rate of banks' credit (gross) to Government

Source: Statistics Department, Bangladesh Bank.

It refers to gross loan amount extended by banks to the Government.

6.2 Annual growth rate of NBDCs' credit (gross) to Government

Source: Statistics Department, Bangladesh Bank.

It refers to gross loan amount extended by NBDCs to the Government sector.

6.3 Annual growth rate of banks' loans to housing sector

Source: Statistics Department, Bangladesh Bank.

Loans to residential housing refers to loans extended by banks for residential housing in urban and rural areas, house renovation/repairing/extension, flat and land purchase; loans to commercial housing refers to loans extended by banks for commercial building and housing by developers/contractors.

6.4 Annual growth rate of FIs' loans to housing sector

Source: Department of Financial Institutions and Markets, Bangladesh Bank.

It refers to loans extended by FIs for both residential and commercial purposes; due to unavailability of data of all NBDCs, FIs' loans to housing sector was used as FIs constitute the majority of the NBDCs.

6.5 Banks' loans to counterpart sector

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by banks to their three major institutional counterparts namely NFCs (both private and public), households and government; it excludes bills discounted and purchased.

6.6 NBDCs' loans to counterpart sector

Source: Statistics Department, Bangladesh Bank.

It refers to loans extended by NBDCs to their three major institutional counterparts namely NFCs (both private and public), households and government.

6.7 Banks' cross-border claims

Source: Statistics Department, Bangladesh Bank.

Cross-border claims of banks include foreign currency notes in hand, balances with banks abroad, bilateral trade credits, wage earners' balance abroad, foreign bills, foreign direct investments, portfolio investments and advances to non-residents; claims that are granted or extended to non-residents are referred to as cross-border claims on an "immediate borrower" basis i.e. claims allocated to the actual non-resident borrowers with whom the original risk lies; it differs from "ultimate risk" basis which refers

to claims allocated to the non-resident guarantors (of the non-resident borrower) with whom the final risk lies. For more details, see "Guidelines to the international consolidated banking statistics" available at http://www.bis.org/statistics/consbankstatsguide_old.pdf.

6.8 NBDCs' cross-border claims

Source: Statistics Department, Bangladesh Bank.

Cross-border claims of NBDCs include only foreign currency notes in hand.

7. Structural risk:

7.1 Banking sector size

a. Domestic Bank

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio of total assets of domestic scheduled banks to nominal GDP; domestic scheduled banks include all scheduled banks except foreign commercial banks.

b. Foreign Bank

Source: Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio of total assets of foreign commercial banks to nominal GDP.

7.2 Banking sector leverage

Source: Department of Off-site Supervision, BB and Scheduled Banks; computation: Financial Stability Department, BB.

The indicator is based on the ratio between total assets of the banking sector and its capital.

7.3 FI sector size

Source: Financial Institutions; computation: Financial Stability Department, BB.

The indicator is based on the ratio of total assets of financial institutions (FIs) to nominal GDP.

7.4 FI sector leverage

Source: Department of Financial Institutions and Markets, BB and Financial Institutions; computation: Financial Stability Department, BB.

The indicator is based on the ratio between total assets of the FIs sector and its capital.
