Government Domestic Borrowing, December 2024

Government borrows to finance for the budget implementation mainly from two domestic sources: banking system and non-banking sources. However, balances of government deposits and other funds are net out from the banking system borrowing. On the other hand, government borrowing from non-banking domestic sources incorporates savings schemes introduced by the Directorate of National Savings (NSD) and government T-bills and T-bonds held by non-bank financial institutions, insurance companies, individual investors, etc.

7. Concluding Remarks

Despite the higher repayment of the previous debt, government domestic borrowing from the banking system during July-December of FY25 showed positive growth compared to the same period of FY24, owing to increased financing through government securities. However, non-bank borrowing (net) for the same period under review showed a significant rise relative to the corresponding period of FY24, primarily due to substantial holdings of government securities by different institutions and individuals other than banks.
