Introduction

Islamic banking is a financial system that promotes finance according to Islamic Shariah law. The elimination of Riba makes Islamic banking system unique and widely acceptable especially among the Muslims. The Islamic banking system is mainly based on Quranic norms and Sunnah. In this system, the risk as well as returns on investment is equally shared between the stakeholders.

The Islamic finance industry has established substantially over the last ten years. Conventional banks are also now opening Islamic branches and windows taking into account public demand. At present, besides conventional banking services, seventeen conventional commercial banks are providing Islamic banking services through forty nine Islamic banking branches and twelve conventional commercial banks are providing Islamic banking services through six-hundred and thirty two Islamic banking windows. Ten conventional commercial banks are providing Islamic banking services through both branch and window (Table 1).

With a view to conducting banking business in accordance with Islamic Shariah Islamic banking services are introduced in all Muslim countries throughout the world. The journey of Islamic banking in Bangladesh began in 1983 with establishment of Islami Bank Bangladesh PLC. Later on, in 1987, the second Islamic bank of the country, Al Baraka Bank Ltd was established. However, in 1996, two more banks, Al-arafah Islami Bank PLC and Social Investment Bank Limited (At present Social Islami Bank PLC) were given clearance to operate under the Islamic banking principles. In July 2001, another bank namely Shahjalal Islami bank PLC began its operations. Subsequently, two traditional banks namely EXIM Bank PLC and First Security Bank (At present First Security Islami Bank PLC) were converted to Islamic bank, and EXIM bank started operations as full-fledged Islamic bank in 2004. After some time the fourth generation bank Union Bank PLC started its journey as an Islamic bank in Bangladesh on 07 March 2013. NRB Global Bank was converted into an Islamic bank in March 2021 and at present it is known as Global Islami Bank PLC. Then in March 2022, another conventional bank, Standard Bank PLC, was transformed into an Islamic bank. Currently, ten full-fledged Islamic banks are operating in Bangladesh.

Besides Islamic Banks, Islamic NBFCs industry is also expanding through opening Islamic branches and windows taking into account public demand. At present, among thirty five NBFCs, two NBFCs are operating as full-fledged Islamic NBFC, one conventional NBFC is providing Islamic NBFC services through seven Islamic NBFC branches including four windows and seven conventional NBFC are providing Islamic NBFC services through sixty nine Islamic NBFC windows (Table-14)

In order for conducting NBFCs business in accordance with Islamic Shariah, Islamic NBFCs services are introduced in most of the Muslim countries throughout the world. The journey of Islamic NBFCs in Bangladesh began in 2001 with the establishment of Islamic Finance and Investment Ltd. Later on, in 2007, the second Islamic NBFC of the country, Hajj Finance Company Limited was established. Later on, seven NBFCs have launched their Islamic NBFCs services through opening branches and windows.

In Bangladesh, the extent of Islamic banking services is increasing rapidly like other Muslim countries of the world. Islamic banks/NBFCs governed by Islamic Sharia'h are running in parallel with conventional banks/NBFCs. In Islamic banking Riba is used to refer to interest. According to Islamic Law interest is prohibited, that is why Riba is prohibited in Islamic banking. Based upon this idea Islamic banking is running.

As several Islamic banks are operating in the banking sector of Bangladesh, Statistics Department of Bangladesh Bank took necessary initiatives and issued a circular [STD Circular No-2, Date: 06-02-2022] instructing all banks who are offering Islamic banking services to report data on Islamic banking in a prescribed format. Likewise data collection from Islamic banks, Statistics Department of Bangladesh Bank also took necessary initiatives and issued a circular [STD Circular No-01, Date: 15-01-2025] instructing all NBFCs who are offering Islamic NBFCs services to report data on Islamic financing in a prescribed format.

It is necessary to disseminate the statistics of different indicators related to Islamic banking to public, researchers, educationist & policy makers so that they may aware of Islamic banking practices in Bangladesh or they can conduct further research or policy makers can formulate policies if requires.

This report tries to find the trend of major indicators of Islamic banks as well as Islamic NBFCs in Bangladesh in order to give readers a preliminary idea about the current Islamic banking and finance practices in the country. In the Executive Summary portion, the trend and nature of growth of different indicators have been discussed. In Statistical Tables & Charts portion detailed data on the indicators are furnished. Finally based on the findings of the analysis this report is ended with some concluding remarks.

Executive Summary

Overview

This portion of the report provides a descriptive analysis of some of the indicators of both **Islamic and Conventional banking** in Bangladesh aiming at measuring performance of them from November 2023 to August 2026. The study focuses on key banking activities such as deposits**,** investments**,** assets**,** exports**,** imports, and workers' remittances in order to examine trend and nature of growth over the period under study. However, the data unveils differential growth patterns within the two sectors. The findings of the study reveal that conventional banks outperformed Islamic banks in most cases**.**

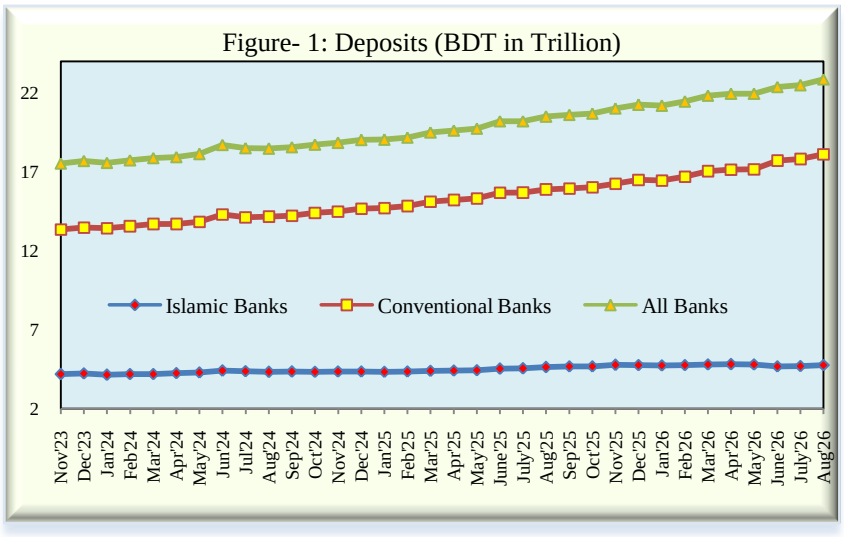

This portion of the report also depicts trend of some indicators such as deposits**,** investments and assets of both **Islamic and Conventional NBFCs** in Bangladesh. The main objective of this analysis is just to give the readers a preliminary idea about the aforementioned indicators of the NBFCs in Bangladesh.

1. For Islamic Banks

1.1 Deposits

The banking sector in Bangladesh experienced an upward trend of deposits from November 2023 to August 2026 (Fig-1). Total deposits increased from BDT 17.54 trillion in November 2023 to BDT 22.88 trillion in August 2026, reflecting gradual expansion of the sector. Conventional banks consistently dominated deposit mobilization, contributing the largest share (79.24%) during the reference month. In contrast Islamic banks, despite their small share (20.76%), demonstrated steady and moderate growth.

Figure- 1: Deposits (BDT in Trillion)

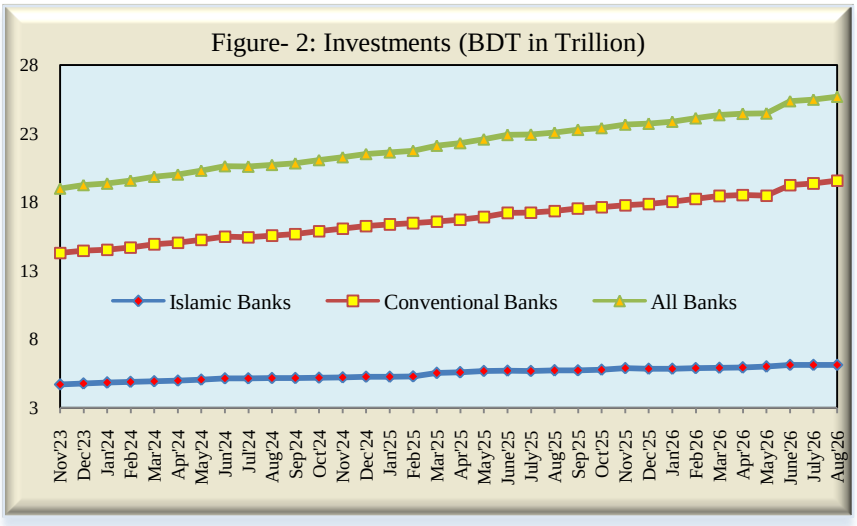

Conventional banks, deposits stood at BDT 18.13 trillion in August 2026, up from BDT 17.81 trillion in July 2026, reflecting a month-on-month growth of about 1.80%. On a year-on-year basis, deposits rose from BDT 15.89 trillion in August 2025 to BDT 18.13 trillion in August 2026, registering a growth of approximately 14.13%. This steady growth in deposits of conventional banks can be primarily attributed to unstable situation in Islamic banking sector after July 2024 uprising, which shifted the reliability and confidence of depositors more in conventional banking.

Focusing on Islamic banks, deposits remained approximately at BDT 4.75 trillion in August 2026, increasing from BDT 4.69 trillion in July 2026, indicating increasing rate at 1.31%. But on a year-

on-year basis, deposits raised from BDT 4.62 trillion in August 2025 to BDT 4.75 trillion in August 2026 which demonstrates a moderate growth of around 2.78%. This year-on-year growth indicates a gradual shift in depositor's preference toward Islamic Banking. Aftermath of July uprising, Bangladesh Bank's surveillance for Islamic banks in terms of liquidity support, identification of weakness of the banks, recruitment of administrators to improve management capacity of the banks etc may facilitate them to regain depositors' confidence. The study also finds that depositors continue to rely predominantly on Mudaraba-based deposits, which make up about 86.84% of Islamic banks deposit base. As of August 2026**,** Islamic banks' deposit base is overwhelmingly driven by the private sector, which accounts for about 89.99% of total deposits (Tables 5 and 6).

1.2 Investments

The investment trend in Bangladesh's banking sector demonstrated sustained growth during the period from November 2023 to August 2026. Total investments increased from BDT 18.99 trillion in November 2023 to BDT 25.70 trillion in August 2026, registering a considerable growth of 35.30%. Whereas, conventional banks accounted for the dominant share (76.17%) of total investments during the reference month and Islamic banks maintained a comparatively smaller (23.83%) yet a stable contribution.

In conventional banks, investments stood at BDT 19.57 trillion in August 2026, increasing from BDT 19.36 trillion in July 2026, indicating a month-on-month increase of about 1.12%. On a year-on-year basis, investments increased from BDT 17.36 trillion in August 2025 to BDT 19.57 trillion in August 2026, marking a growth of 12.75%. Both of these growths suggest a cautious lending and investment strategies of conventional banks focusing on macroeconomic challenges, including inflationary pressures, exchange rate volatility, and tighter regulatory oversight in Bangladesh (Fig. 2; Table 3).

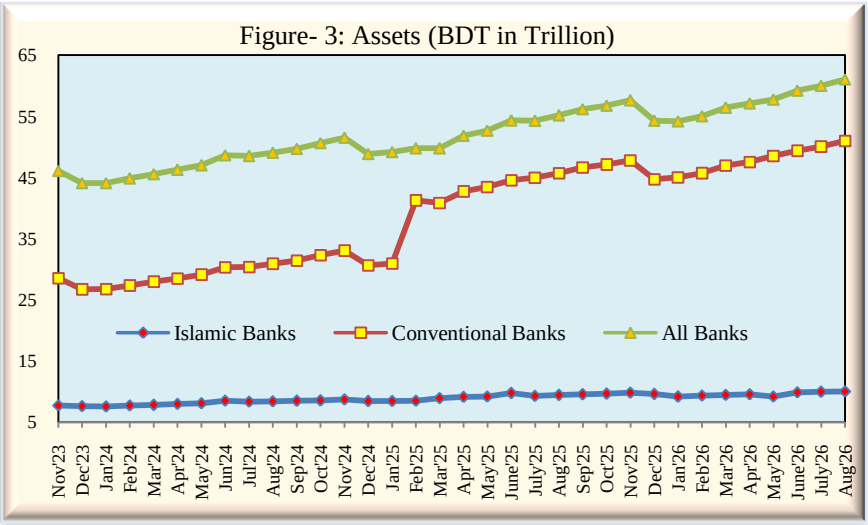

Focusing on Islamic banks, investments mostly stable in BDT 6.12 trillion in August 2026 with previous month. On a year-on-year basis, investments increased by from BDT 5.72 trillion in August 2025 to BDT 6.12 trillion in August 2026, reflecting a growth of approximately 7.13%. The moderate monthly increase reflects a prudent investment strategy, while the year-on-year growth indicates gradual expansion, driven by rising demand for Islamic financing products, particularly profit-and-loss sharing modes. It is also observed that a large share of financing was concentrated in Bai-Murabaha (41.58%), HPSM (18.83%) and Bai-Muajjal (16.72%) showing

dependence on a few key financing structures. From a sectoral perspective, Islamic banks' investments were allocated across various segments of the economy, with the highest concentration in industry and trade & commerce, underscoring their importance in driving productive and commercial economic activities (Tables 7, 8 and 9).

1.3 Assets

In Bangladesh, the assets position of banking sector has exhibited a sustained upward trend in assets growth over the period from November 2023 to August 2026. Total assets increased significantly from BDT 46.09 trillion in November 2023 to BDT 61.06 trillion in August 2026, representing an overall growth of 38.46%**.** Although minor fluctuations were observed, particularly in December 2024 and December 2025, the general trajectory remained positive. This consistent growth indicates strong assets mobilization capacity and reflects the sector's resilience in the face of potential economic and political uncertainties (Fig-3).

Figure- 3: Assets (BDT in Trillion)

In Case conventional banks recorded stronger and more dynamic assets growth throughout the same period. Total assets stood at BDT 51.01 trillion in August 2026, increasing slightly from BDT 50.04 trillion in July 2026, indicating a month-on-month growth of about 1.94%. On a year-on-year basis, assets rose from BDT 45.73 trillion in August 2025 to BDT 51.01 trillion in August 2026, reflecting a moderate growth of approximately 11.56%. This steady month-on-month increase indicates assets revaluation, loan repayments exceeding new disbursements, and tighter regulatory or liquidity conditions of conventional banks in Bangladesh. However, non-performing loans (NPLs), high cost of funds, and prevailing macroeconomic pressure including inflation and exchange rate volatility have also affected the conventional banks to take a cautious stance which reflects on their year-on-year growth.

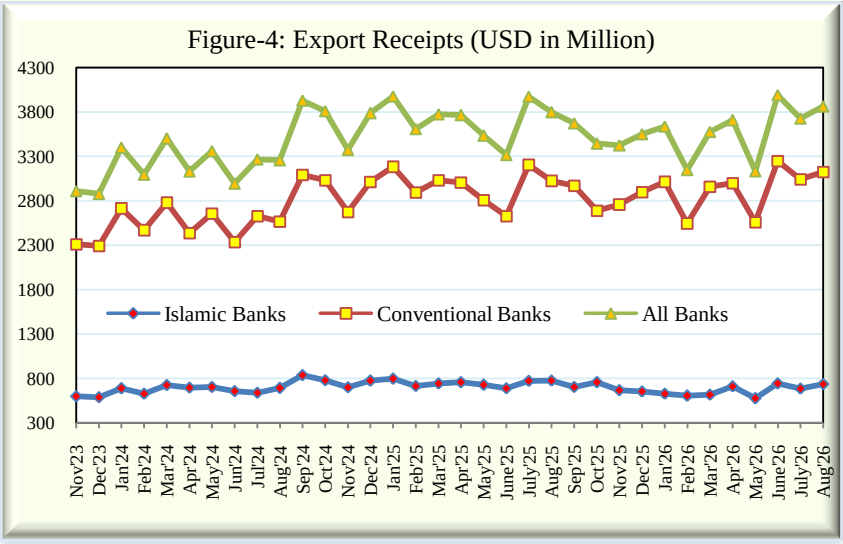

Concerning Islamic banks, total assets at BDT 10.05 trillion in August 2026 compared to BDT 9.96 trillion in July 2026, indicating month-on-month increase of about 0.92%. On a year-on-year basis, assets rose from BDT 9.43 trillion in August 2025 to BDT 10.05 trillion in August 2026, reflecting an increase of 6.57%. The steady year-on-year increase, along with the more pronounced monthly amplification, indicates that Islamic banks experienced a relatively stable but subdued asset position during the period. This performance may reflect higher expansion in financing activities, cautious investment strategies, and persistent liquidity management. Although demand for Shariah-compliant financial services remains positive, limited operational

scale, a relatively narrow range of financial products and ongoing challenges in the banking sector may have constrained asset growth in the short term.

1.4 Export Receipts

Banking system of Bangladesh has been playing an important role through receiving export earnings on behalf of the exporters. The export performance of Bangladesh's banking sector exhibits moderate fluctuations with an overall stable trend during the period from November 2023 to August 2026. Total export receipts ranged between USD 2909 million in November 2023 and USD 3863 million in August 2026, indicating an overall growth of 32.80% but a range-bound movement without sustained long-term growth over this period (Fig-4). The highest export earnings were recorded USD 3992 million in June 2026, closely followed by USD 3977 million in January 2025, reflecting strong external demand and improved trade performance during those periods. In contrast, the lowest export level was observed in USD 2880 million in December 2023, suggesting weaker export activity. By August 2026, exports decreased to USD 3863 million, indicating a moderate contraction compared to the peak levels of 2026.

Figure-4: Export Receipts (USD in Million)

In case conventional banks consistently held a dominant share (80.95%) of total export-financing and proceeds handling during the reference month. Their export volumes recorded USD 3127 million in August 2026, increasing from USD 3043 million in July 2026, indicates a month-on-month increasing at 2.75%. On a year-on-year basis, export receipts USD 3127 million in August 2026, increasing from USD 3023 million in August 2025, reflecting an increase rate of approximately 3.43%. However, export receipts increased by USD 84 million in August 2026 from previous month indicates an increase external demand and domestic supply side supports during the month.

Concerning Islamic banks contributed a smaller yet consistent share (19.05%) of export earnings. Month-on-month comparison Islamic banks export receipts USD 736 million in August 2026 and USD 684 million in July 2026, indicates a month-on-month increasing at 7.56%. On a year-on-year basis, export receipts USD 736 million in August 2026, decreasing from USD 775 million in August 2025, reflecting a decrease rate of 5.04%. However, export performance moderated thereafter, a gradual decline observed in late 2025 and in early 2026 an alternating increase and decrease observed from month to month. Islamic banks consistently handled around 17% to 22% of total export proceeds, remaining stable share.

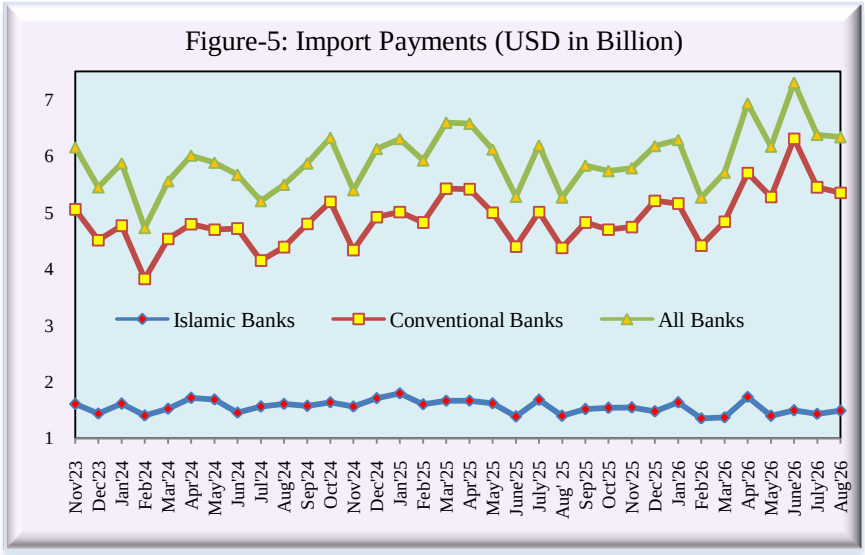

Both Conventional and Islamic banks show a downward adjustment toward early 2026 and increasing after month, indicating positive export momentum. From the above analysis, it can be said that as the majority of country's export proceeds were received by the conventional banks over the period under study, Islamic banks may take necessary initiatives to improve the quality of this service offered by them so that they could capture more market share in receiving export earnings of the banking sector (Fig-4, Table-3).

1.5 Import Payments

The import performance of Bangladesh's banking sector shows noticeable monthly fluctuations during the period from November 2023 to August 2026. Despite short-term volatility, the general movement reflects a moderately stable import pattern with occasional peaks and slowdowns. The highest level of import payments was recorded at USD 6801 million in June 2026, indicating strong import demand during the month. In contrast, the lowest level was observed in February 2024, at USD 4228 million. During the first half of 2026, import payments fluctuated, with alternating increases and decreases from month to month. In August 2026, import payments stood at USD 5836 million, reflecting a slightly decline from the previous month but remaining above the level recorded in February 2024. Overall, imports show a fluctuating but upward trend, without sustained long-term expansion.

In Conventional banks import payments was USD 4852 million in August 2026, decreasing from USD 4945 million in July 2026, indicating a month-on-month decrease of about 1.90%**.** On a year-on-year basis, import payments was USD 4852 million in August 2026 increased from USD 3874 million in August 2025, marking a increase rate at 25.24%. The robust year-on-year increase indicates an outperformance by conventional banks or resumption of private investment in the economy which encourages business investment in capital machinery and raw materials although having economic uncertainty arisen from middle-east war crisis. (Fig-5)

Figure-5: Import Payments (USD in Billion)

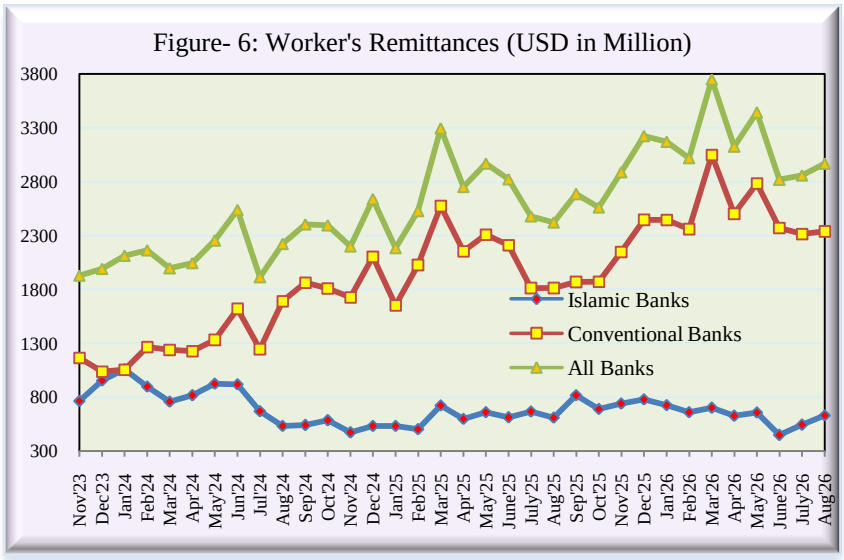

Focusing on Islamic banks Import payments stood at USD 984 million in August 2026 increased from USD 933 million in July 2026, as a month-on-month comparison it's reflected by the increasing rate at 5.52%. On a year-on-year basis, import payments was USD 984 million in August 2026 increased from USD 893 million in August 2025, marking a increase rate at 10.13%. The Islamic banking imports are relatively stable and observed slow-increasing value in the latest period.

1.6 Worker's Remittances

From Figure 6, it can be observed that workers' remittances received through all banks generally increased during the period from November 2023 to August 2026. The upward trend reached its highest level in both March and May 2026, when workers' remittances amounted to USD 3750 and USD 3443 million, due to the seasonal effect of Eid-ul-Fitr and Eid-ul-Azha. Whereas, the total worker's remittance was USD 2967 million in August 2026 increased from USD 2859 million in July 2026. While both Islamic and conventional banks contributed to the inflows, conventional banks consistently handled a larger share, with their dominance becoming more pronounced after the first few months of the period.

Figure- 6: Worker's Remittances (USD in Million)

In Conventional banks month-on-month comparison worker's remittance was USD 2337 million in August 2026 increased from USD 2316 million in July 2026, increasing at 0.94%. Whereas in year-on-year basis, worker's remittance was USD 2337 million in August 2026 increased from USD 1812 million in August 2025, marking a robust growth at 29.01%. In month-on-month comparison Islamic banks worker's remittances increased from USD 543 million in July 2026 to USD 630 million at the end of August 2026, indicating 16.01% increasing rate. Whereas on year-on-year comparison Islamic banks faced remittances increase from USD 610 million in August 2025 to USD 630 million at the end of August 2026, reflecting a 3.29% increase.

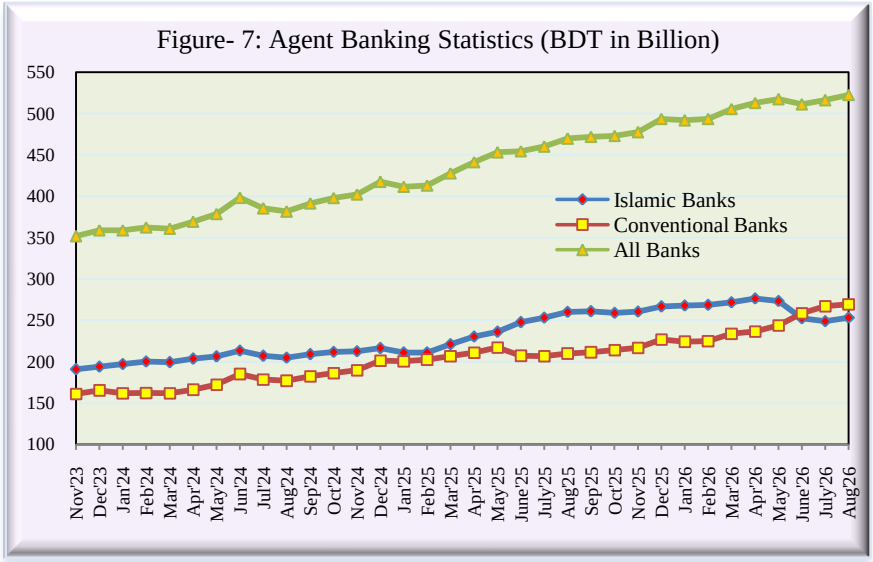

Despite Islamic banks' early-year performance, their inability to retain their share in worker remittances helps conventional banks' worker's remittances to grow. However recent experience in losing market share by Islamic banks highlights unstable situation of Islamic banking sector. As workers' remittances receipts play a vital role in building the base for foreign currency reserve of a bank which ultimately assists in settling foreign currency transactions, Islamic banks may go for sufficient reforms as regard to the factors which influences depositors' confidence in Islamic banks. Additionally, geopolitical uncertainties in Middle East, including the Iran crisis may also have affect on remittance inflow patterns.(Fig.6, Table-3).

1.7 Agent Banking Deposits

Line diagram for agent banking deposits for all banks in figure 7 describes that agent banking deposits is gradually increasing over the period November 2023 to August 2026 (Fig-7). This indicator of agent banking reflects that agent banking is gaining popularity day by day in Bangladesh. Total agent banking deposits increased from BDT 352 billion in November 2023 to

BDT 523 billion in August 2026, reflecting gradual expansion of the sector with 48.64% growth rate.

Figure- 7: Agent Banking Statistics (BDT in Billion)

In case of conventional banks, agent banking deposits stood at BDT 269 billion in August 2026, increasing from BDT 267 billion in July 2026, indicating a month-on-month increasing of about 0.85%. On a year-on-year basis, deposits rose from BDT 210 billion in August 2025 to BDT 269 billion in August 2026, registering a growth of approximately 28.49%. Agent banking deposits of conventional banks experienced a steady trend and it contributed 51.55% of total agent banking deposits share in the banking arena. Focusing on Islamic banks, agent banking deposits recorded approximately at BDT 253 billion in August 2026, increasing from BDT 249 billion in July 2026, with 1.71% increasing rate. However, on a year-on-year basis, agent banking deposits decreased from BDT 260 billion in August 2025 to BDT 253 billion in August 2026, reflecting a 2.63% decrease. The data indicates that in August 2026, Islamic banks accounted for holding 48.45% of the total deposits in agent banking arena.

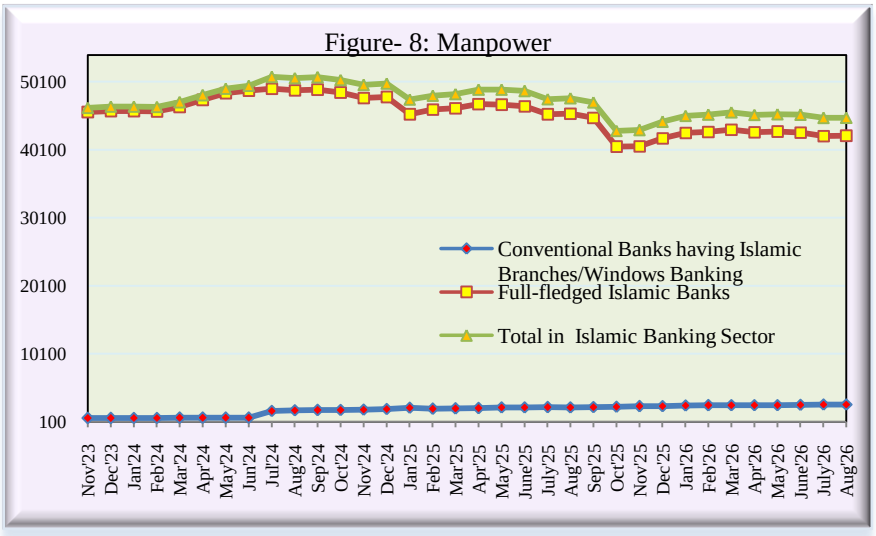

The data reveals that both the segments of the banking sector achieved robust growth in agent banking deposits but the growth of Conventional banks outpaced the growth of Islamic banks. However, comparing the size of banking operations in the country, Islamic banks are performing better than those of conventional banks in this area. This may because of either expansion of agent banking by Islamic banks or increase in confidence level of the depositors in Islamic banking or any other factor. However, In order to keep up this competitive advantage over conventional banking, Islamic Banks may consider expanding outreach, introducing digital services, and strengthening agent networks etc. (Fig.7, Table-3).

1.8 Manpower

The manpower position of Islamic banking operations within the Banking sector in Bangladesh shows a declining trend during the period November 2023 to August 2026 (Table-2). Total manpower in Islamic Banks stood at 44782 in August 2026 increased from 44765 in July 2026, indicating a month-on-month increase of 0.04%. On the other hand, the total manpower was 47641 in August 2025 which indicates a year-on-year decline of 6%.

Several contextual factors may explain this scenario. In general, increasing digitalization and automation of financial services have reduced the need for manual administrative and operational

staff in many financial institutions. After July 2024 uprising, some unstable situation arises due to improper management of Islamic banks specially in full-fledged Islamic Banks, manpower shows a declining trend. On the contrary, conventional banks having sharia'h based banking operation are enhancing their Islamic banking activities with increase of manpower gradually.

The number of specialized employees in Islamic banking is 580 in August 2026 increase from 578 in July 2026. However, compared to 566 employees in July 2025, the sector recorded a year-on-year growth of 2.47%. This increase reflects a continued emphasis on professional specialization and the development of Shariah-compliant expertise within Bangladesh's Islamic banking industry. The growth may be driven by increasing awareness of Islamic finance, higher demand for professionals with certifications such as CSAA and CIPA, and the rising significance of Shariah governance, compliance, and risk management practices across Islamic financial institutions.

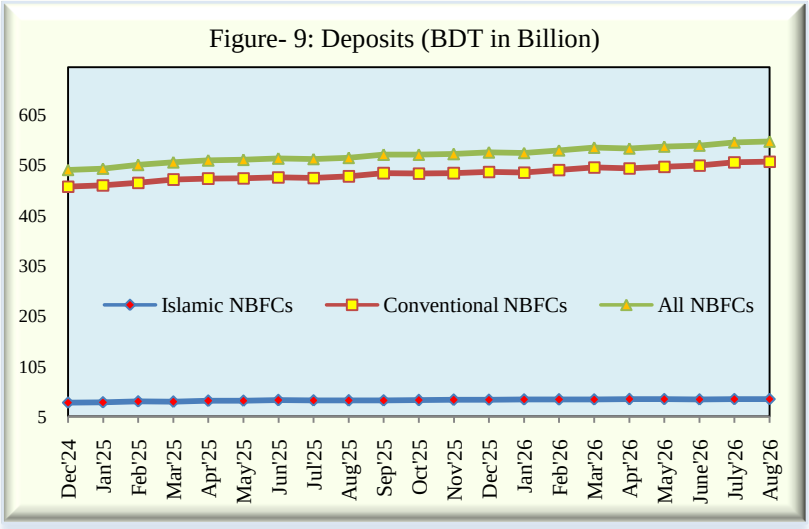

2. For Islamic NBFCs

2.1 Deposits

The deposit trend of the Non-Bank Financial Companies (NBFCs) sector in Bangladesh exhibited a steady upward trajectory over the period from December 2024 to August 2026 (Fig-9). Total deposits increased from BDT 496 billion in December 2024 to BDT 552 billion in August 2026, reflecting gradual expansion of the sector. Conventional NBFCs consistently dominated deposit mobilization, contributing the largest share (92.76%) during the reference month, while Islamic NBFCs, though relatively small (7.24%), showed moderate but stable growth.

In case of conventional NBFCs, deposits stood at BDT 512 billion in August 2026, increasing from BDT 511 billion in July 2026, indicating a month-on-month increase of about 0.24%. On a year-on-year basis, deposits rose from BDT 483 billion in August 2025 to BDT 512 in August 2026 registering a growth of approximately 6.09%. This steady increase can be attributed to several factors in our country, including higher deposit rates offered by NBFCs compared to banks and growing demand for alternative financing channels alongside the banking sector.

Figure- 9: Deposits (BDT in Billion)

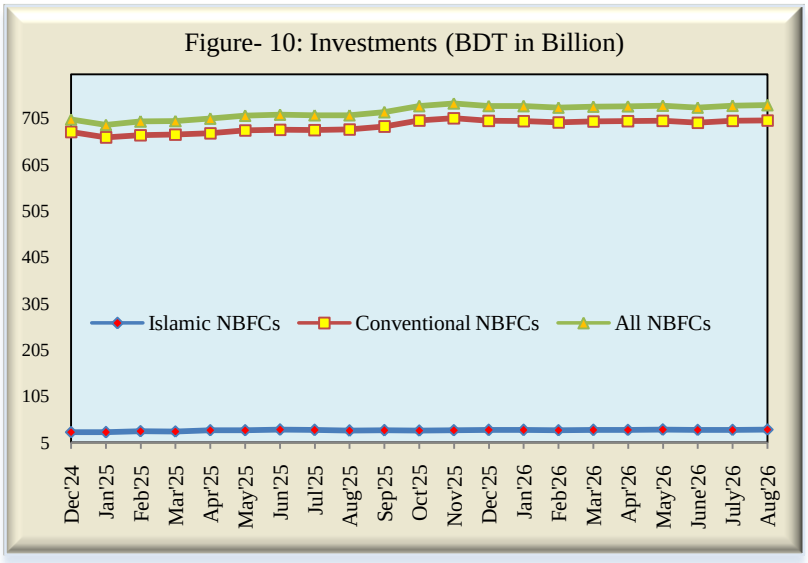

Focusing on Islamic NBFCs, deposits remain stable at BDT 40 billion in August 2026, showing no significant change from the previous month. On a year-on-year basis, deposits increased from BDT 37 billion in August 2025 to BDT 40 billion in August 2026, reflecting a growth of around 8.46%. The year-on-year growth suggests a gradual shift in depositor preference toward Shariah-compliant financial products in Bangladesh. Factors such as increasing religious awareness and the expansion of Islamic financial institutions have contributed to this trend. Islamic NBFC deposits remain highly concentrated in Mudaraba-based instruments, accounting for nearly 98.99% of total deposits, which highlights the strong preference for profit-sharing modes among depositors. As of August 2026, the private sector contributed the largest (72.70%) share to Islamic NBFC deposits (Tables 17, 18, and 19).

2.2 Investments

The investment trend of the Non-Bank Financial Companies (NBFCs) sector in Bangladesh shows a moderate fluctuation with an overall stable pattern during the period from December 2024 to August 2026 (Fig-10). Total investments showed a modest upward trend, rising from BDT 703 billion in December 2024 to BDT 733 billion in August 2026, after reaching a peak of BDT 737 billion in November 2025. Conventional NBFCs accounted for the major share (95.50%) of total investments during the reference month, while Islamic NBFCs maintained a relatively small (4.50%) but steady contribution.

In conventional NBFCs, investments stood at BDT 700 billion in August 2026, showing no significant change from the previous month. On a year-on-year basis, investments increased from BDT 681 billion in August 2025 to BDT 700 billion in August 2026, registering a growth of approximately 2.84%. The positive year-on-year growth suggests that overall investment activities expanded over the year, supported by demand for financing in sectors such as trade, industry, and SMEs, as well as relatively higher returns offered by NBFCs compared to traditional banking channels.

Figure- 10: Investments (BDT in Billion)

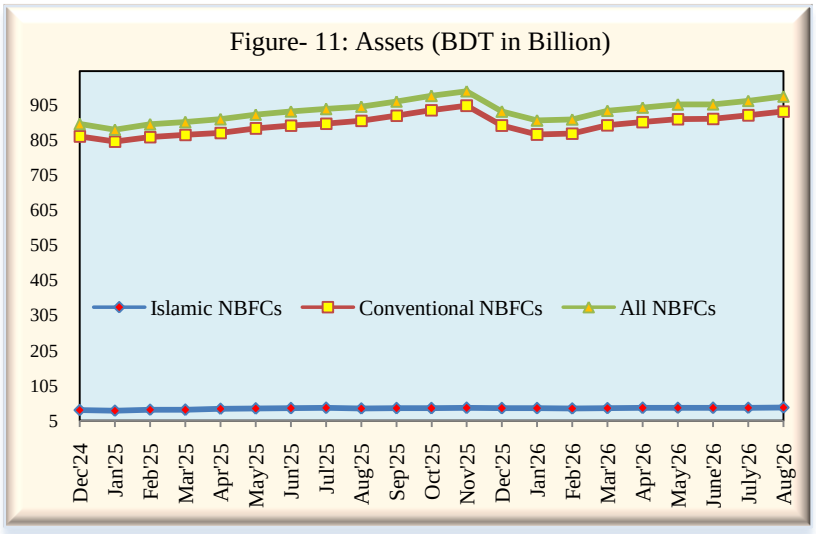

Focusing on Islamic NBFCs, investments stood at BDT 33 billion in August 2026 which was BDT 32 billion in July 2026. On a year-on-year basis, investments in August 2025 was BDT 31 billion and in August 2026 it stood at BDT 33 billion, reflecting an increase rate at 7.99%. The relatively stable investment level of Islamic NBFCs throughout the period from August 2025 to August 2026, characterized by minor fluctuations of around BDT 1–2 billion, suggests a restrained growth environment. This trend may reflect subdued financing demand, liquidity pressures, limited availability of Shariah-compliant investment avenues, prudent risk-management practices, intensified competition from Islamic banking institutions, and the overall slowdown in private-sector investment activities in Bangladesh. It is also notable that more than half of these investments were deployed through HPSM (36.24%) and Ijarah (26.22%) modes during that period. Islamic NBFC investments were disbursed across various sectors for diverse economic purposes, with the majority directed towards industry and trade & commerce (Tables 20, 21, and 22).

2.3 Assets

The asset position of the Non-Bank Financial Companies (NBFCs) sector in Bangladesh exhibited a fluctuating but overall expanding trend during the period from December 2024 to August 2026 (Fig-11). Total assets increased from BDT 850 billion in December 2024 to a peak of BDT 943 billion in November 2025, before declining and stabilizing at BDT 928 billion in August 2026. Conventional NBFCs consistently held the dominant share (95.45%) of total assets, while Islamic NBFCs contributed a comparatively

Figure- 11: Assets (BDT in Billion)

smaller (4.55%) but steady portion. The overall trend suggests a phase of strong asset growth until late 2025, followed by a contraction likely reflecting adjustments in investment portfolios and tighter financial conditions in the economy.

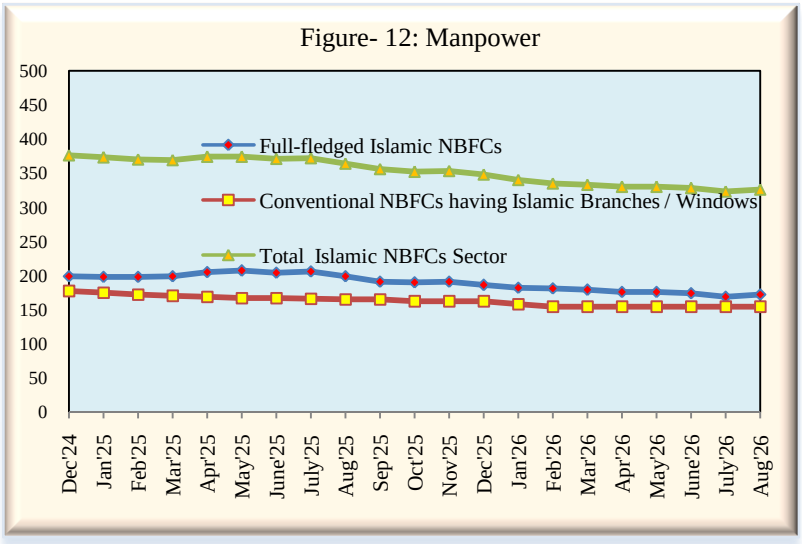

In case of conventional NBFCs, total assets stood at BDT 886 billion in August 2026, increasing from BDT 874 billion in July 2026, indicating a month-on-month growth of about 1.33%. On a year-on-year basis, assets rose from BDT 859 billion in August 2025 to BDT 886 billion in August 2026, reflecting a modest growth of approximately 3.10%. The positive year-on-year growth indicates that conventional NBFCs regained some momentum despite elevated non-performing loans (NPLs), high cost of funds, and prevailing macroeconomic pressure including inflation and exchange rate volatility.

Concerning Islamic NBFCs, total assets of Islamic NBFCs stood steady at BDT 42 billion in August 2026, showing no significant change from the previous month. On a year-on-year basis, assets increased from BDT 40 billion in August 2025 to BDT 42 billion in August 2026, representing a growth of approximately 5.58%. The significnt year-on-year growth suggests continued expansion of Islamic financial operations. This growth can be linked to increasing demand for Shariah-compliant financing, particularly through profit-sharing and asset-backed modes. However, the relatively small scale and limited diversification of Islamic NBFCs may constrain faster asset expansion in the short run.

2.4 Manpower

Total manpower in Islamic NBFCs decreased compared to previous month and stood at 326 employees in August 2026. On a year-on-year basis, manpower declined significantly from 364 employees in August 2025 to 326 employees in August 2026, registering a contraction of 10.44%. This declining trend reflects a cautious operational strategy adopted by many NBFCs in Bangladesh amid persistent macroeconomic challenges, including high inflation, rising cost of funds, liquidity pressure, and slower expansion of financing activities. In addition, the increasing adoption of digital financial services and operational automation may have reduced the need for workforce expansion in the sector.

Figure- 12: Manpower

Despite the overall decline in total manpower, the number of specialized employees in Islamic Banking and Finance remained unchanged at 11 in August 2026 compared to July 2026. Similarly on a year-on-year comparison, number of employees with specialized degree unchanged from August 2025. This situation highlights the need for a gradual strengthening of professional specialization and greater institutional emphasis on Shariah-compliant expertise in Bangladesh. Key measures should include increasing awareness of Islamic finance, creating greater demand for qualified professionals with certifications such as CSAA and CIPA, and strengthening the role of Shariah governance, compliance, and risk management across all Islamic financial institutions. These initiatives would help develop a more skilled and sustainable workforce for the continued growth of Islamic banking and finance in Bangladesh.

Concluding Remarks

In this study it is found that during the study period Islamic banks held approximately one-fourth of total deposits of the banking industry and large amount of deposits were collected through Mudarabah deposits scheme. At the same time the study also finds that largest amount of deposits of Islamic banks was accumulated from the private sector among all sectors in Bangladesh.

This study reveals that in case of investment, Islamic banking investment contributed approximately one-fourth of total investment in the banking industry. Full-fledged Islamic banks play vital role in sanctioning Islamic investment which is about 89% of total Islamic investment while investment sanctioned by other Conventional banks having Islamic branches and windows is only 11% of total Islamic investment. Full-fledged Islamic banks, branches and windows sanctioned significant amount of investment in Bai-Murabaha (42%). About 41% of investment was sanctioned for the industry sector, 31% of investment was sanctioned for the trade & commerce sector. It is important to mention that agent banking, school banking, mobile financial services, e-banking and e-commerce are now administered through Islamic banking. Approximately 21% of total worker's remittance collected through Islamic banking channel. Furthermore, approximately half (48%) of total agent banking deposits in banking industry belongs to Islamic banking.

Islamic banking has been playing a significant role in Bangladesh over the last couple of decades. On the other hand, Islamic NBFCs have many opportunities to expand their services in order for capturing contribution of deposits, investments and assets. As Sharia'h based transactions are becoming popular to the mass people, so there is a great opportunity to expand Islamic banking activities in both rural and urban areas and to disseminate Islamic banking knowledge to the people of the grass-root level of the country. Islamic banking activities are expanding in parallel with conventional banking day by day. This will promote financial inclusion which ultimately would strengthen the financial system of the country.
